HabiTEQ™

Development of innovative technology impacts our daily lives offering a wealth of new possibilities which includes our very own home or working space.

This is particularly true for the electrical installation – the heart of every building. This area holds great potential for designing properties with greater flexibility, energy saving and outstanding comfort without compromising lifestyle.

The **HabiTEQ™** automation solutions and components are tailored for your building - offering a platform of opportunities to achieve a versatile system satisfying the most demanding customers needs.

HabiTEQ™ components

Offer a single and simple integrated system instead of separate control solutions...

In comparison with classic electrical installations, the HabiTEQ™ intelligent building control system offers noticeable advantages.

All the different functional subsystems within your living space are seamlessly integrated via a 2-wire BUS to a single communicating system, controlled by a powerful central controller. This enables the optimal, energy efficient interaction of the subsystems, which is almost impossible with conventional technology.

The system allows a large number of interactive functions to be realised, including:

- | Lighting control | Heating/ventilation control | Climate control | Shutter control | Safety monitoring
- | Energy management | Central automation |

HabiTEQ™ solutions

Intelligent “plug and play” distribution boards, designed for easy installation and time saving.

GE offers two standard pre-equipped and pre-wired distribution boards – one for apartments (Fix-o-Rail 150) and one for houses (QuiXtra 630). These standard solutions are and flexible and adaptable. The installation can be extended with components in- and outside the panel. Inside there is a significant reserve for DIN-rail modules. Outside the system can be extended with HabiTEQ wireless modules. The communication between the two media (wired and wireless) is bi-directional.

Customer benefits

- Significant time saving
- Available on stock
- 100% tested solution
- Easy extension
- Sharp prices

HabiTEQ™ Flexible solution for electrical installation

Seamlessly integrating safety, security, lighting, climate, automation of mechanical loads such as shutters and blinds, and many more!
HabiTEQ™ provides comfort, control and convenience through multiple stylish user interfaces (touch screen, switches, etc.)

comfort

convenience

or smart & simple ons!

Easy to install and customize. Using a PC through a choice of serial or ethernet link adds tangible value to installers of commercial buildings and home owners whatever the property: apartments, family homes, villas, etc.

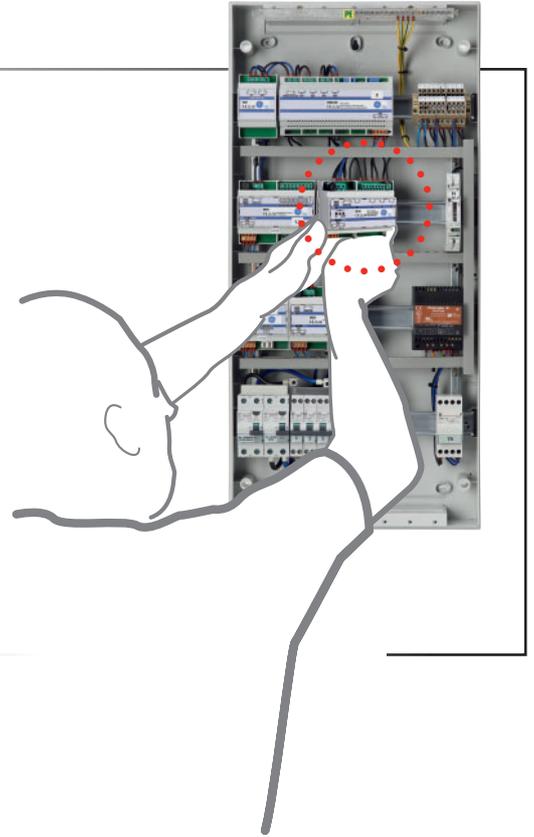

security

Easy to install

Modular building blocks, easily scalable!

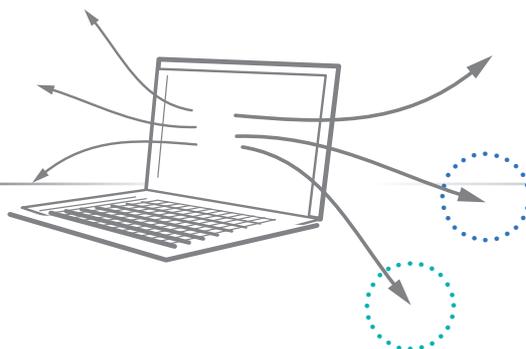

- Fast 2-wire BUS system with no polarity, no restrictions on topology
- Quick and easy system configuration
- Fast and simple installation

Value for money

Track and control energy usage with a simple pulse meter

- Flexible functionality – easily enhance and adapt with limited or no additional hardware
- Up to 50% cost saving on system installation & setup⁽¹⁾

(1) Compared to other popular distributed systems.

Flexibility

Visualize and control through the internet via a PC or mobile phone with no additional hardware⁽¹⁾

- Integrate third party infrared (IR) remote control
- Make any switch intelligent
- Easy to configure
- User friendly

Integration with larger systems through the ethernet⁽²⁾ for buildings

Remote access
Multiple clients

Redundancy
Manual override on field modules

Open Standards

(1) Controller with ethernet port.
(2) Using the event handler protocol, supplied on request.

Home solution

● **Carbon monoxide sensor** - FGT312CO
- Opens ventilation or shutters

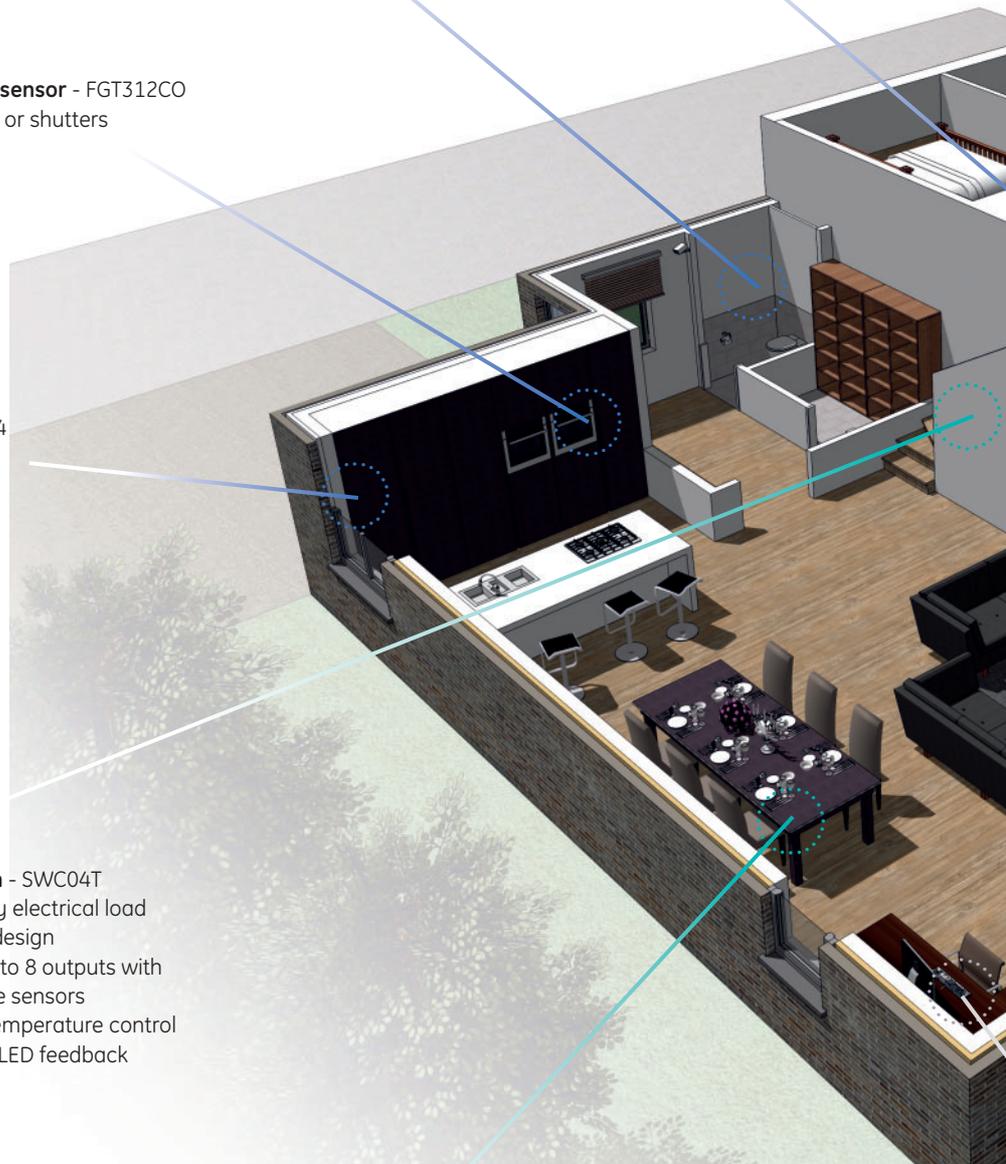

● **Smoke sensor** - DP721R
Smoke sensor pre-warning

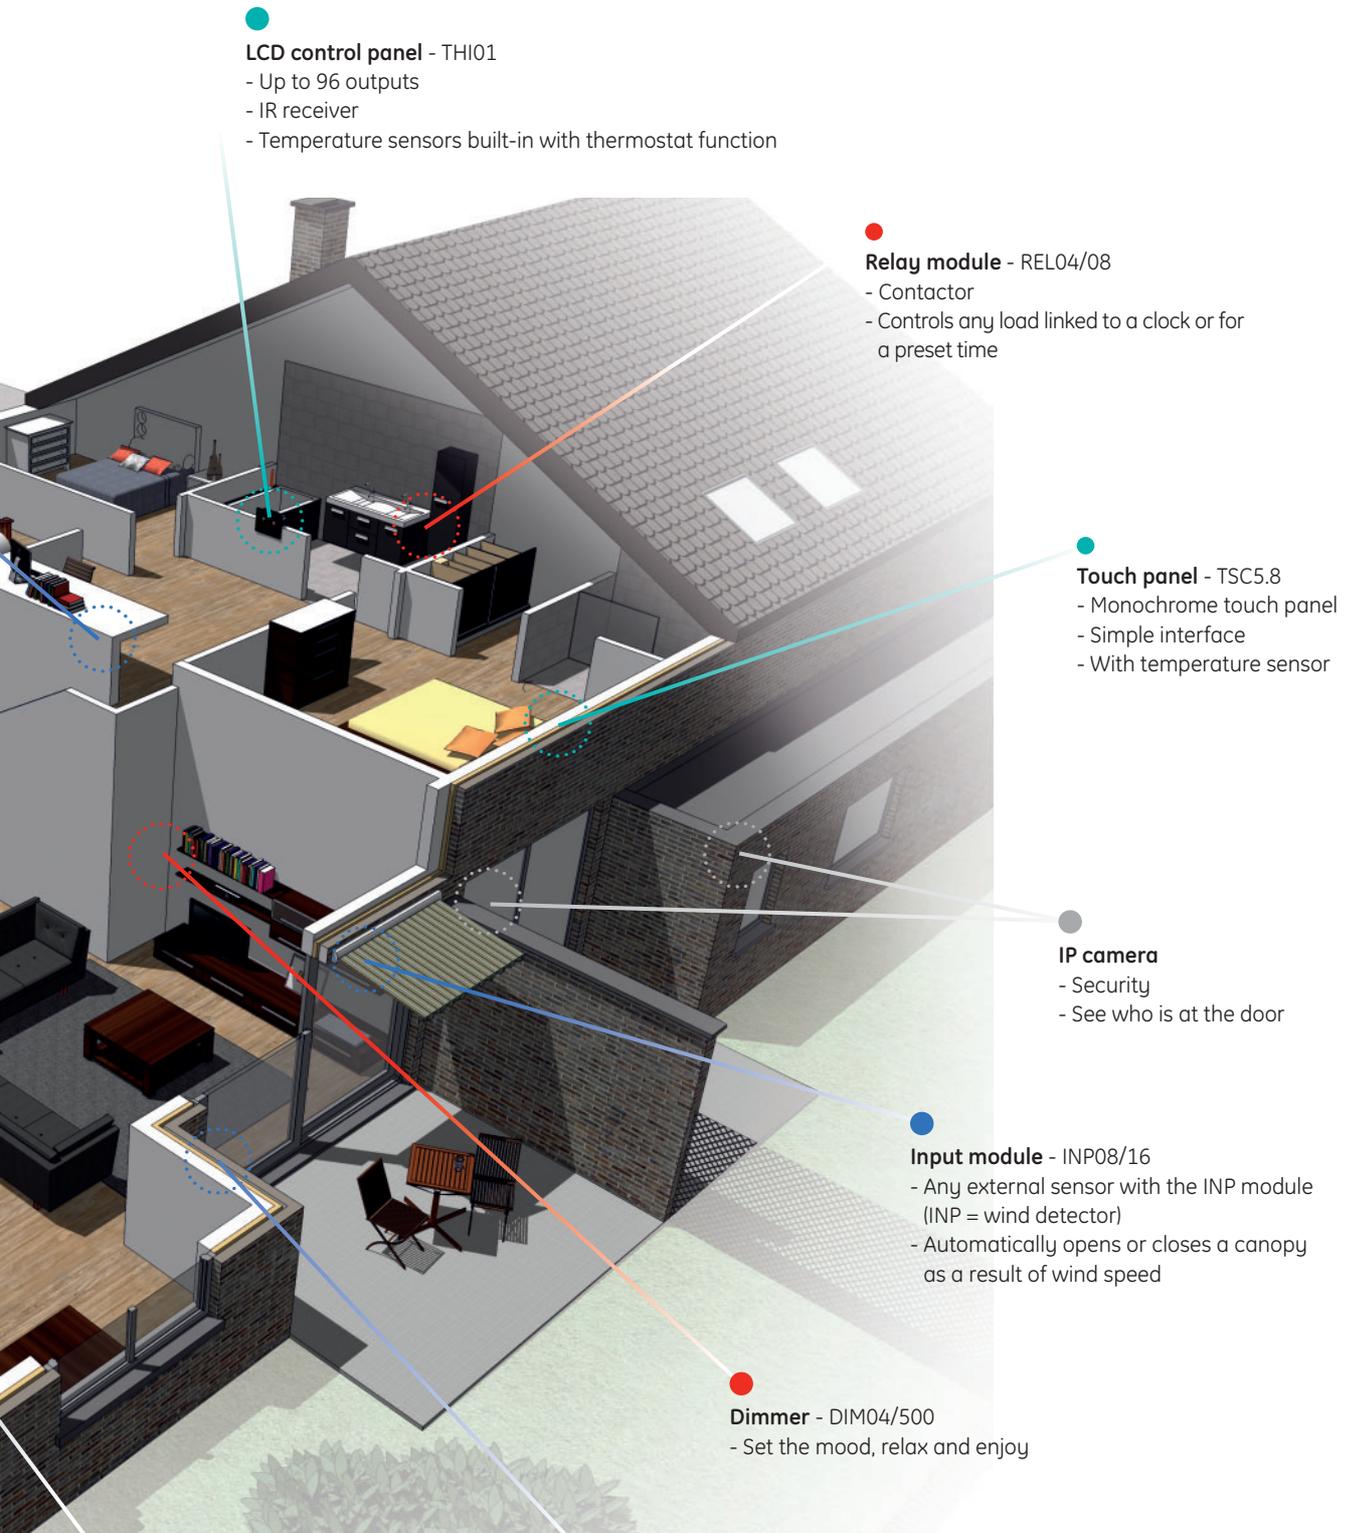

● **Motion sensor** - PIR
EV100 (indoor) DI502 (outdoor)
- Sensor with high immunity to false motion
- For automatic lighting and heating

● **Gas sensor** - FGELPG24
- Opens the shutters

● **Smart switch** - SWC04T
- Controls any electrical load
- With Niko® design
- Controls up to 8 outputs with temperature sensors
- Multizone temperature control
- Multicolour LED feedback

● **Interface module** - SMS01
- Any mobile phone
- Controls any electrical load with text

LCD control panel - THIO1
 - Up to 96 outputs
 - IR receiver
 - Temperature sensors built-in with thermostat function

Relay module - REL04/08
 - Contactor
 - Controls any load linked to a clock or for a preset time

Touch panel - TSC5.8
 - Monochrome touch panel
 - Simple interface
 - With temperature sensor

IP camera
 - Security
 - See who is at the door

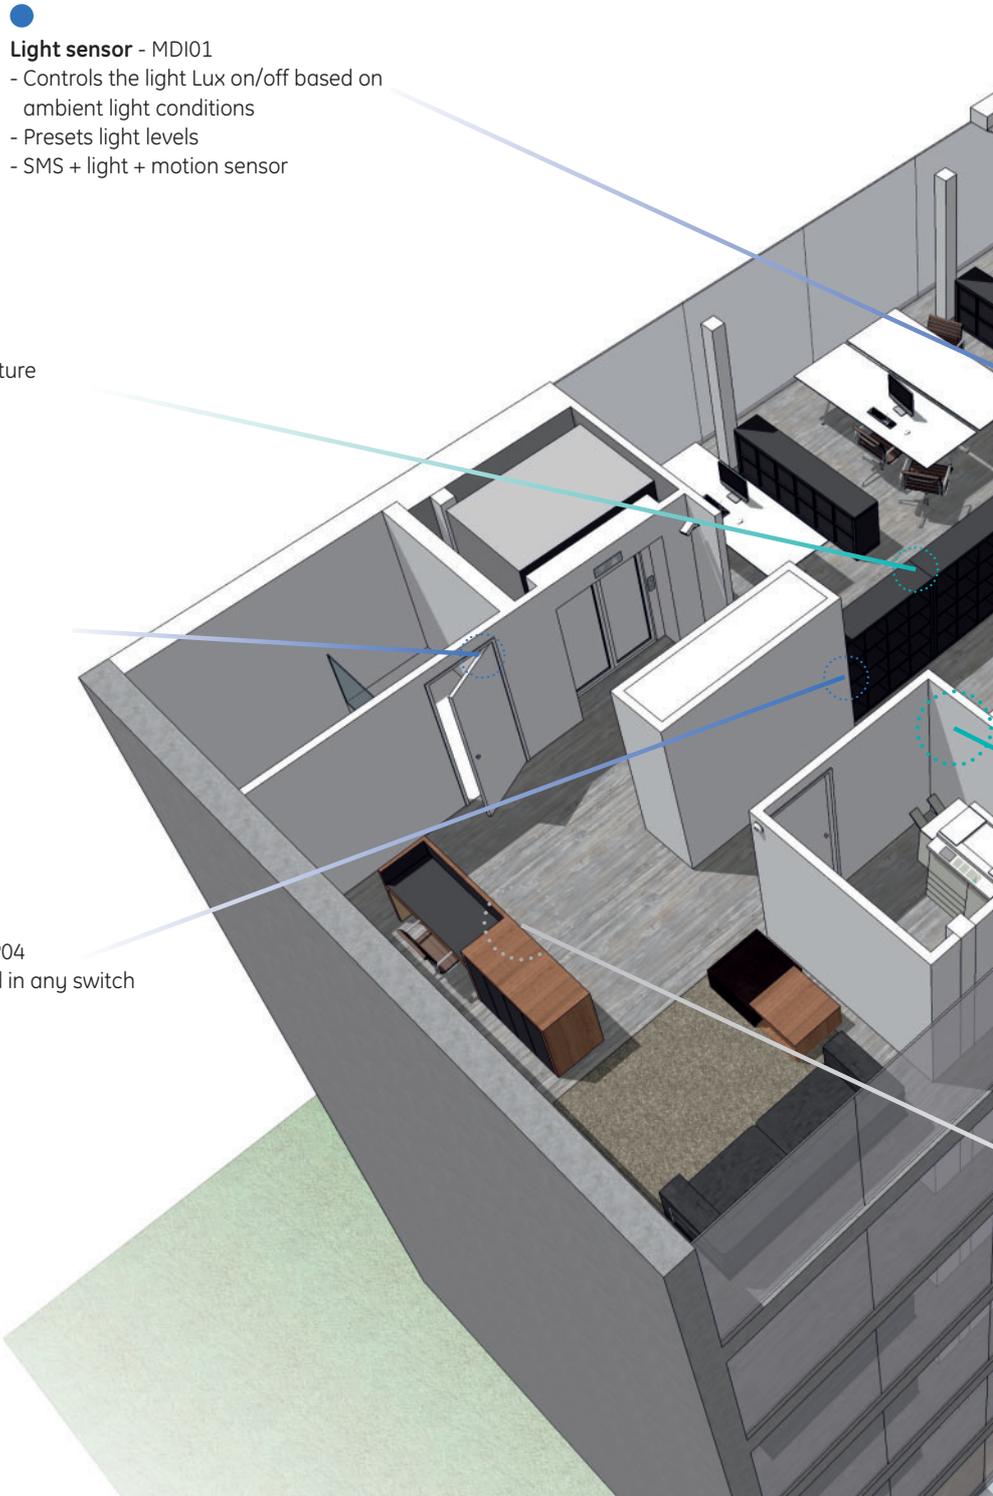

Input module - INP08/16
 - Any external sensor with the INP module (INP = wind detector)
 - Automatically opens or closes a canopy as a result of wind speed

Dimmer - DIM04/500
 - Set the mood, relax and enjoy

Touch panel-PC - TCPC/NAV10.2
 - Central home control with energy visualization

Input module - INP04 / INP02
 - Can be integrated in any switch

Building solution

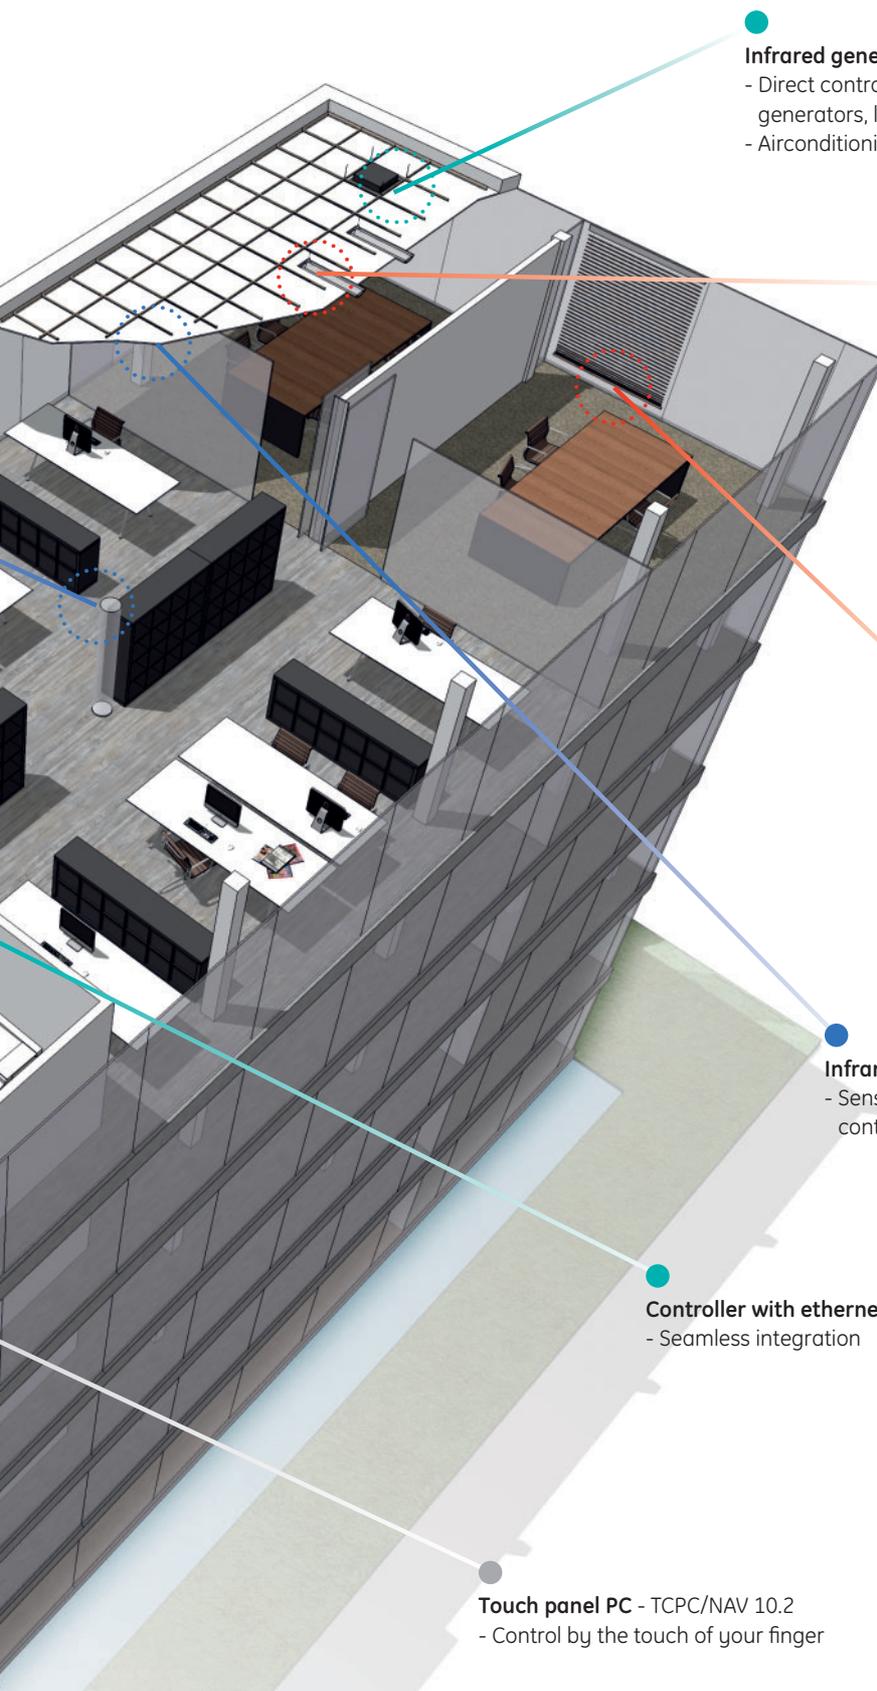

● **Light sensor** - MDI01
- Controls the light Lux on/off based on ambient light conditions
- Presets light levels
- SMS + light + motion sensor

● **Room controller** - THI01
- To control zone temperature

● **Door contact** - DC101
- Energy saving; heating shuts down if the window opens

● **Input module** - INP04
- Can be integrated in any switch

Infrared generator - IRG04

- Direct control of airconditioning with infrared generators, linked to presence of open windows
- Airconditioning goes to standby if a window opens

Dimmer - ANR04

- Dimming of fluorescent lamps
- Reduces light levels to the perfect amount of light in combination with the light sensor

Shutter up / down - ROL02

- Shutters / blinds... positioned perfectly
- Stand alone or linked to a smart sensor light

Infrared sensor - EV669 / DD669

- Senses 360° motion and controls lights and heating

Controller with ethernet - CTD

- Seamless integration

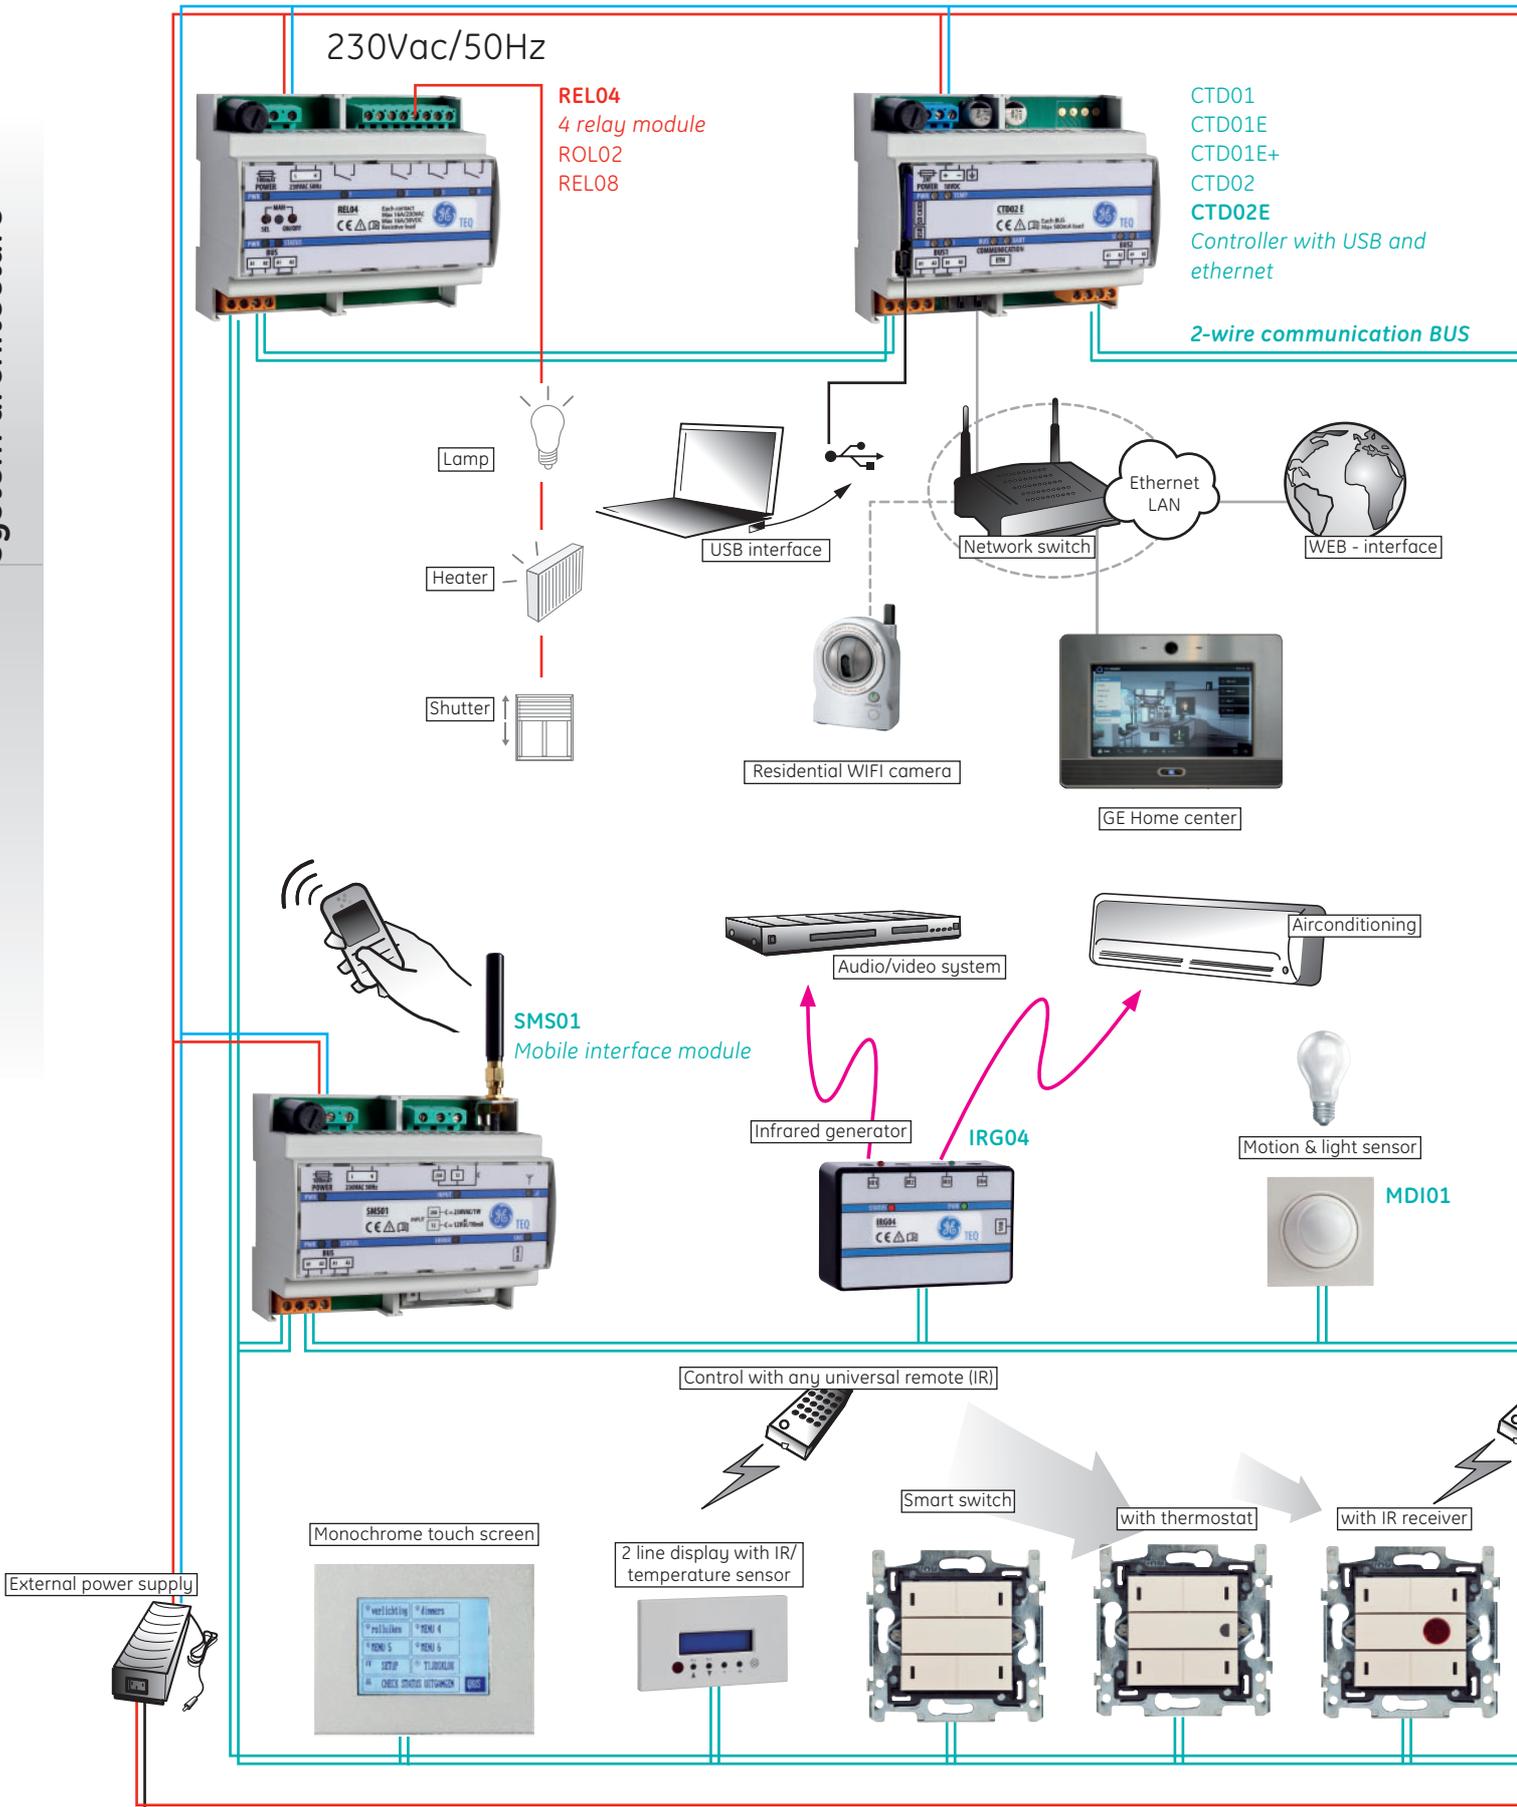

Touch panel PC - TCPC/NAV 10.2

- Control by the touch of your finger

Relays / Load control

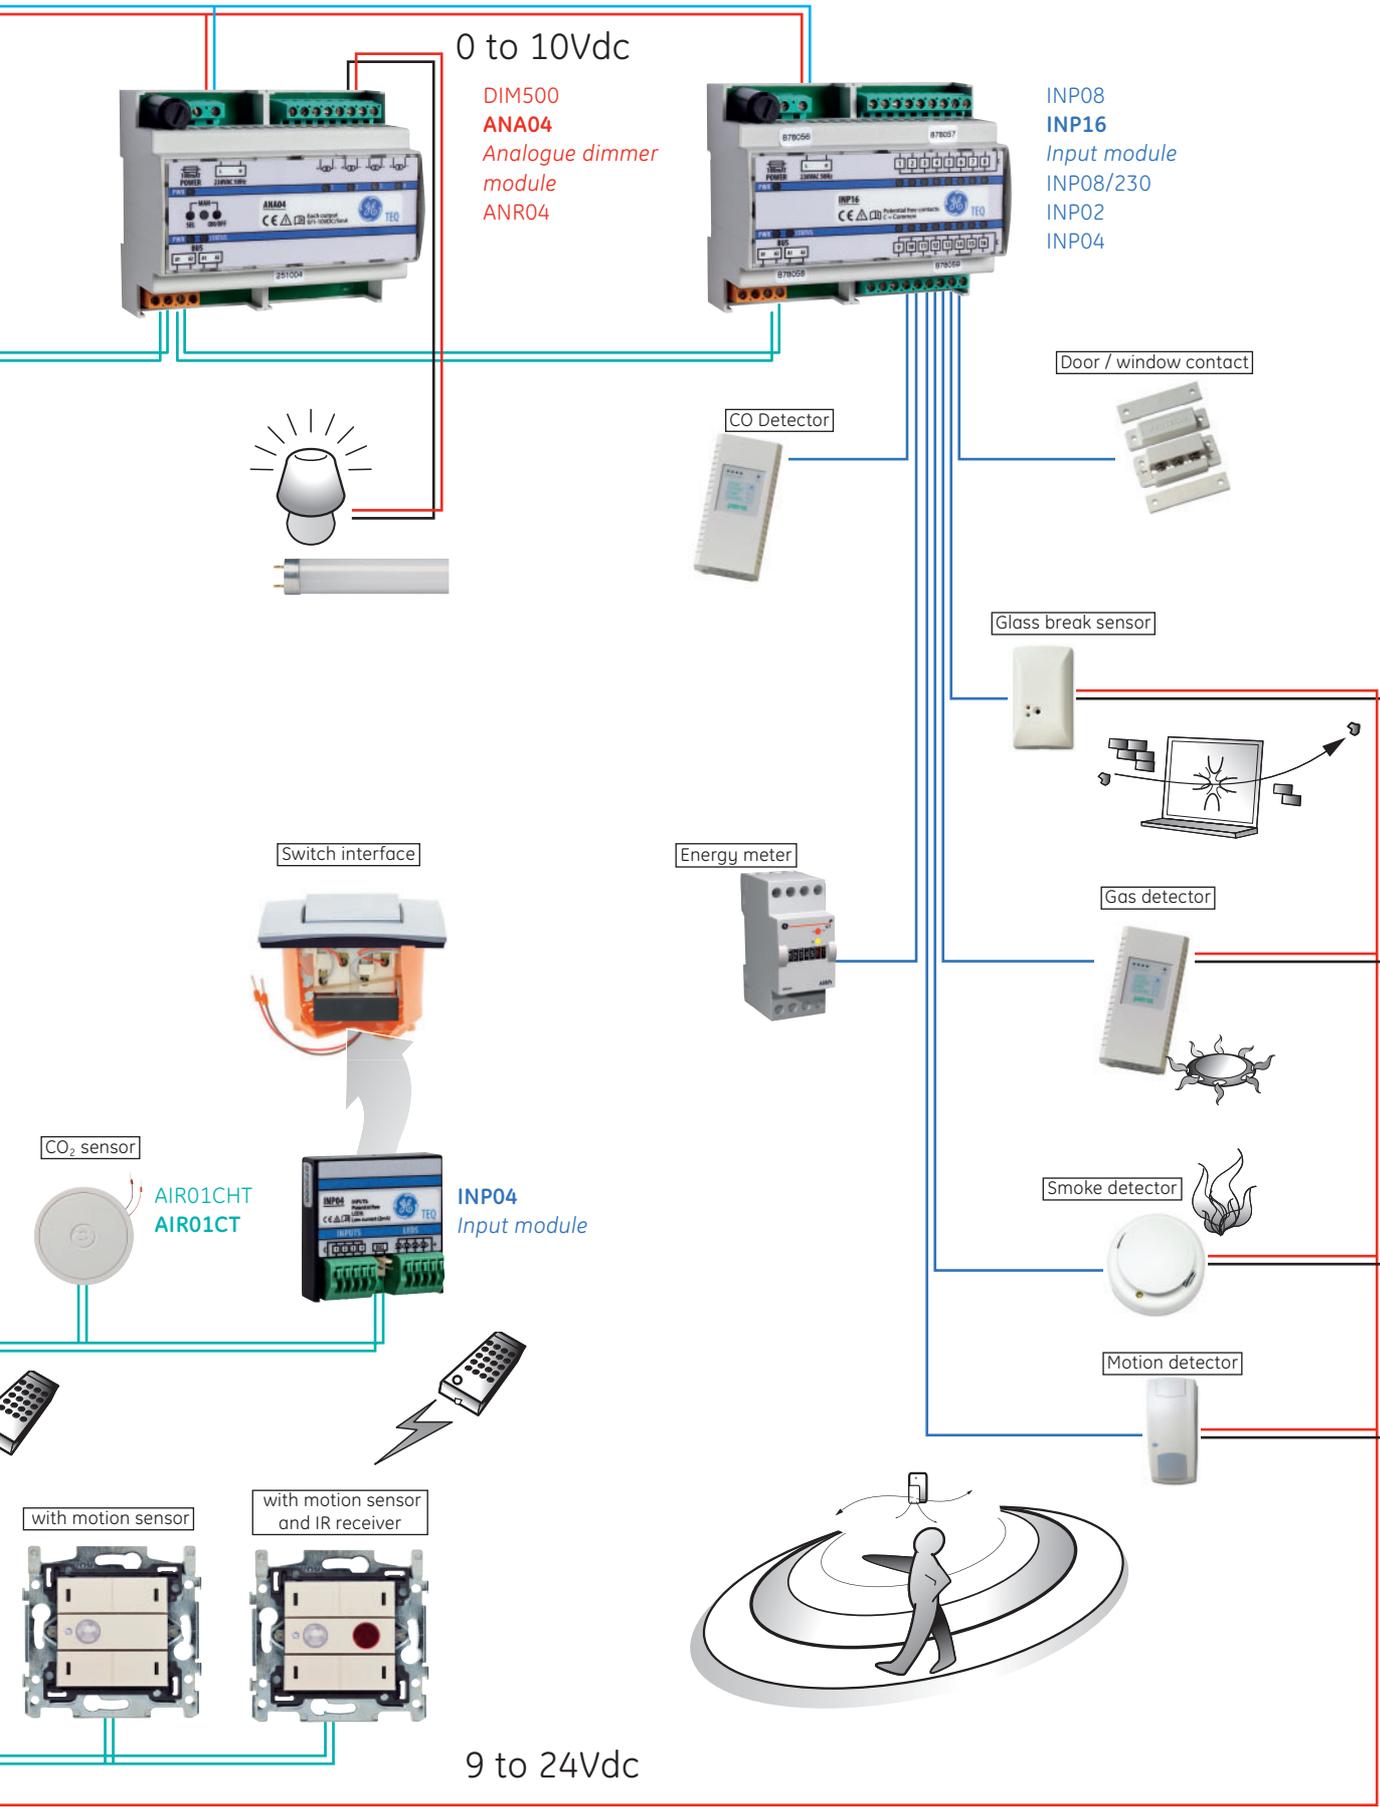

Controllers

System architecture

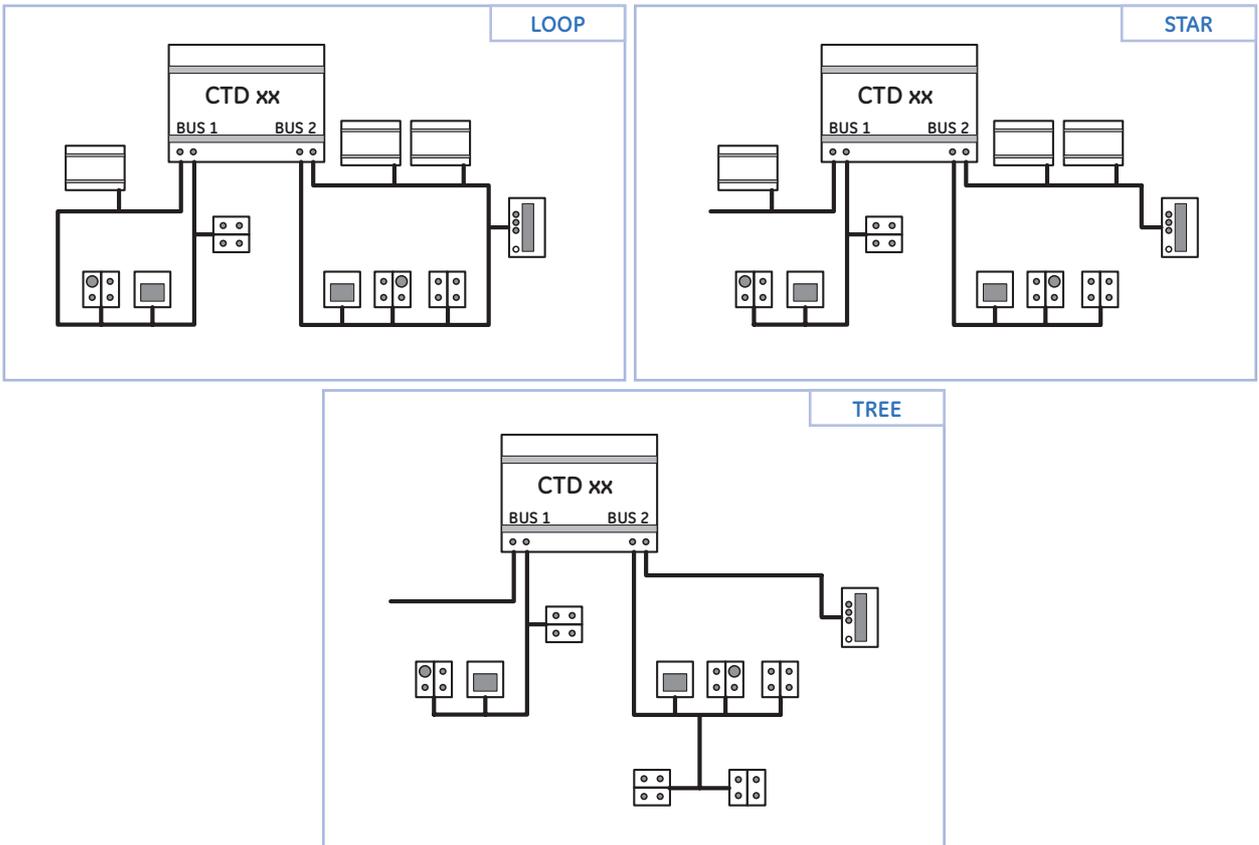

Lighting control

Input modules

System topologies

Flexible BUS topology... star, loop, tree or any combination with no polarity... enables quick and easy installation

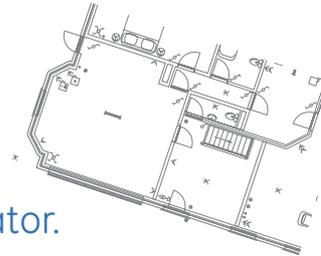

System overview

- 2-wire bi-directional BUS communication.
- BUS supplies power to the I/O module and has no polarity
- I/O reaction speed: 400 outlets = 0.3 sec
- Simultaneous communication
- Current based BUS principle = high resistance against external influences
- Cable: shielded twisted pair section 2 x 1.0 mm²
Distance max. 200m (open), max. 400 m (closed)

Your home or building automation solution... is just six steps away

1 Enter installation details on floor plan.

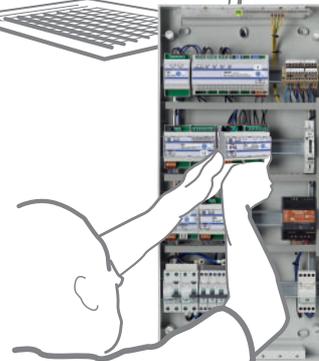

2 Transfer installation details to the configurator.

3 Output of parts list and HabiTEQ™ distribution board.

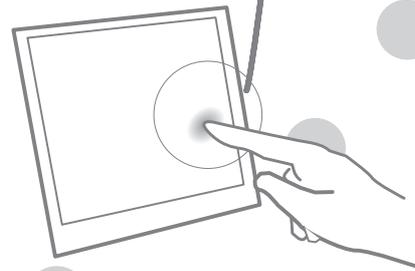

4 Place the order for your HabiTEQ™ distribution board & other accessories (switches, touchscreen etc..)

5 Install & connect

6 Configure & startup

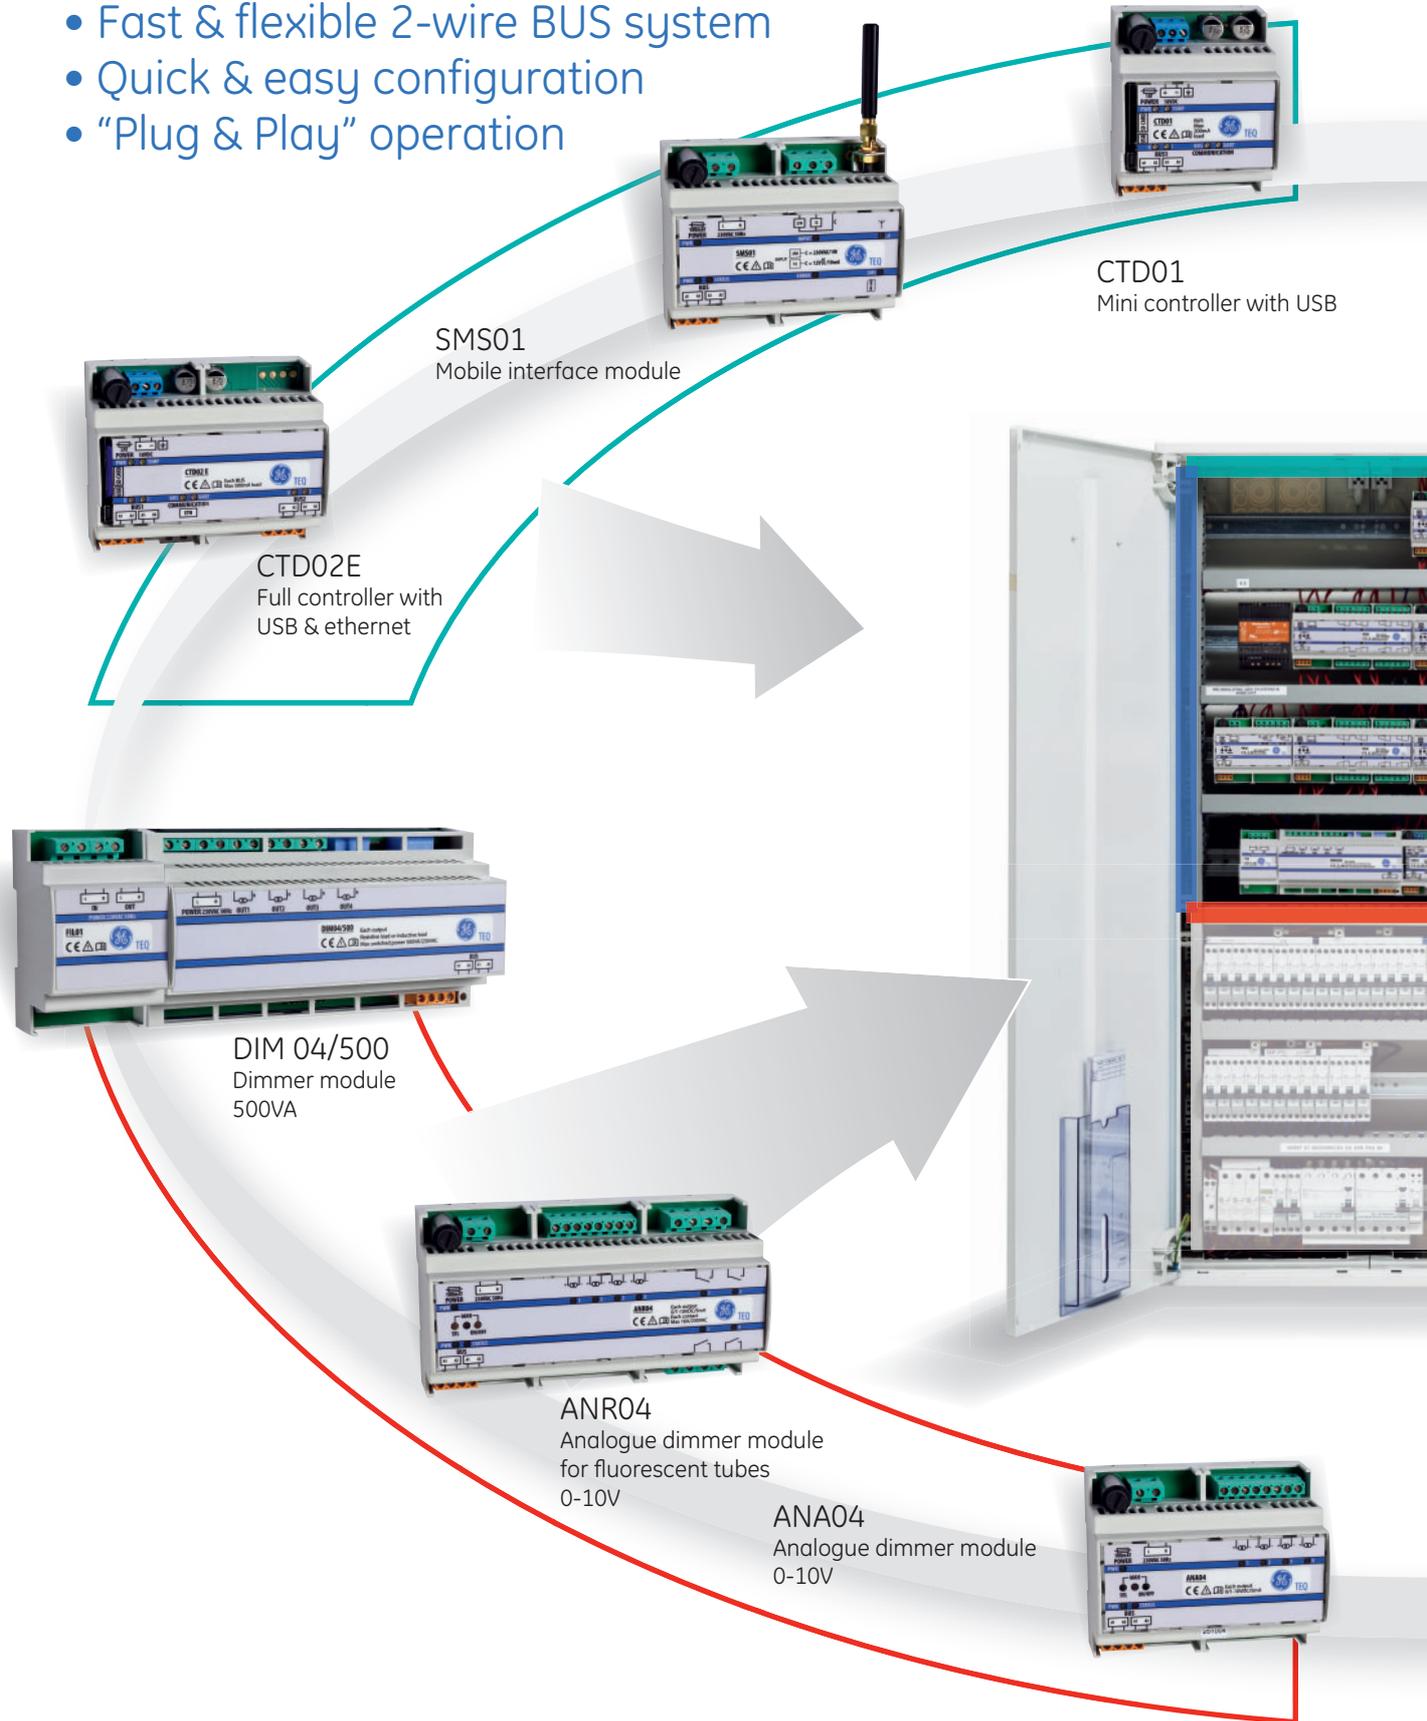

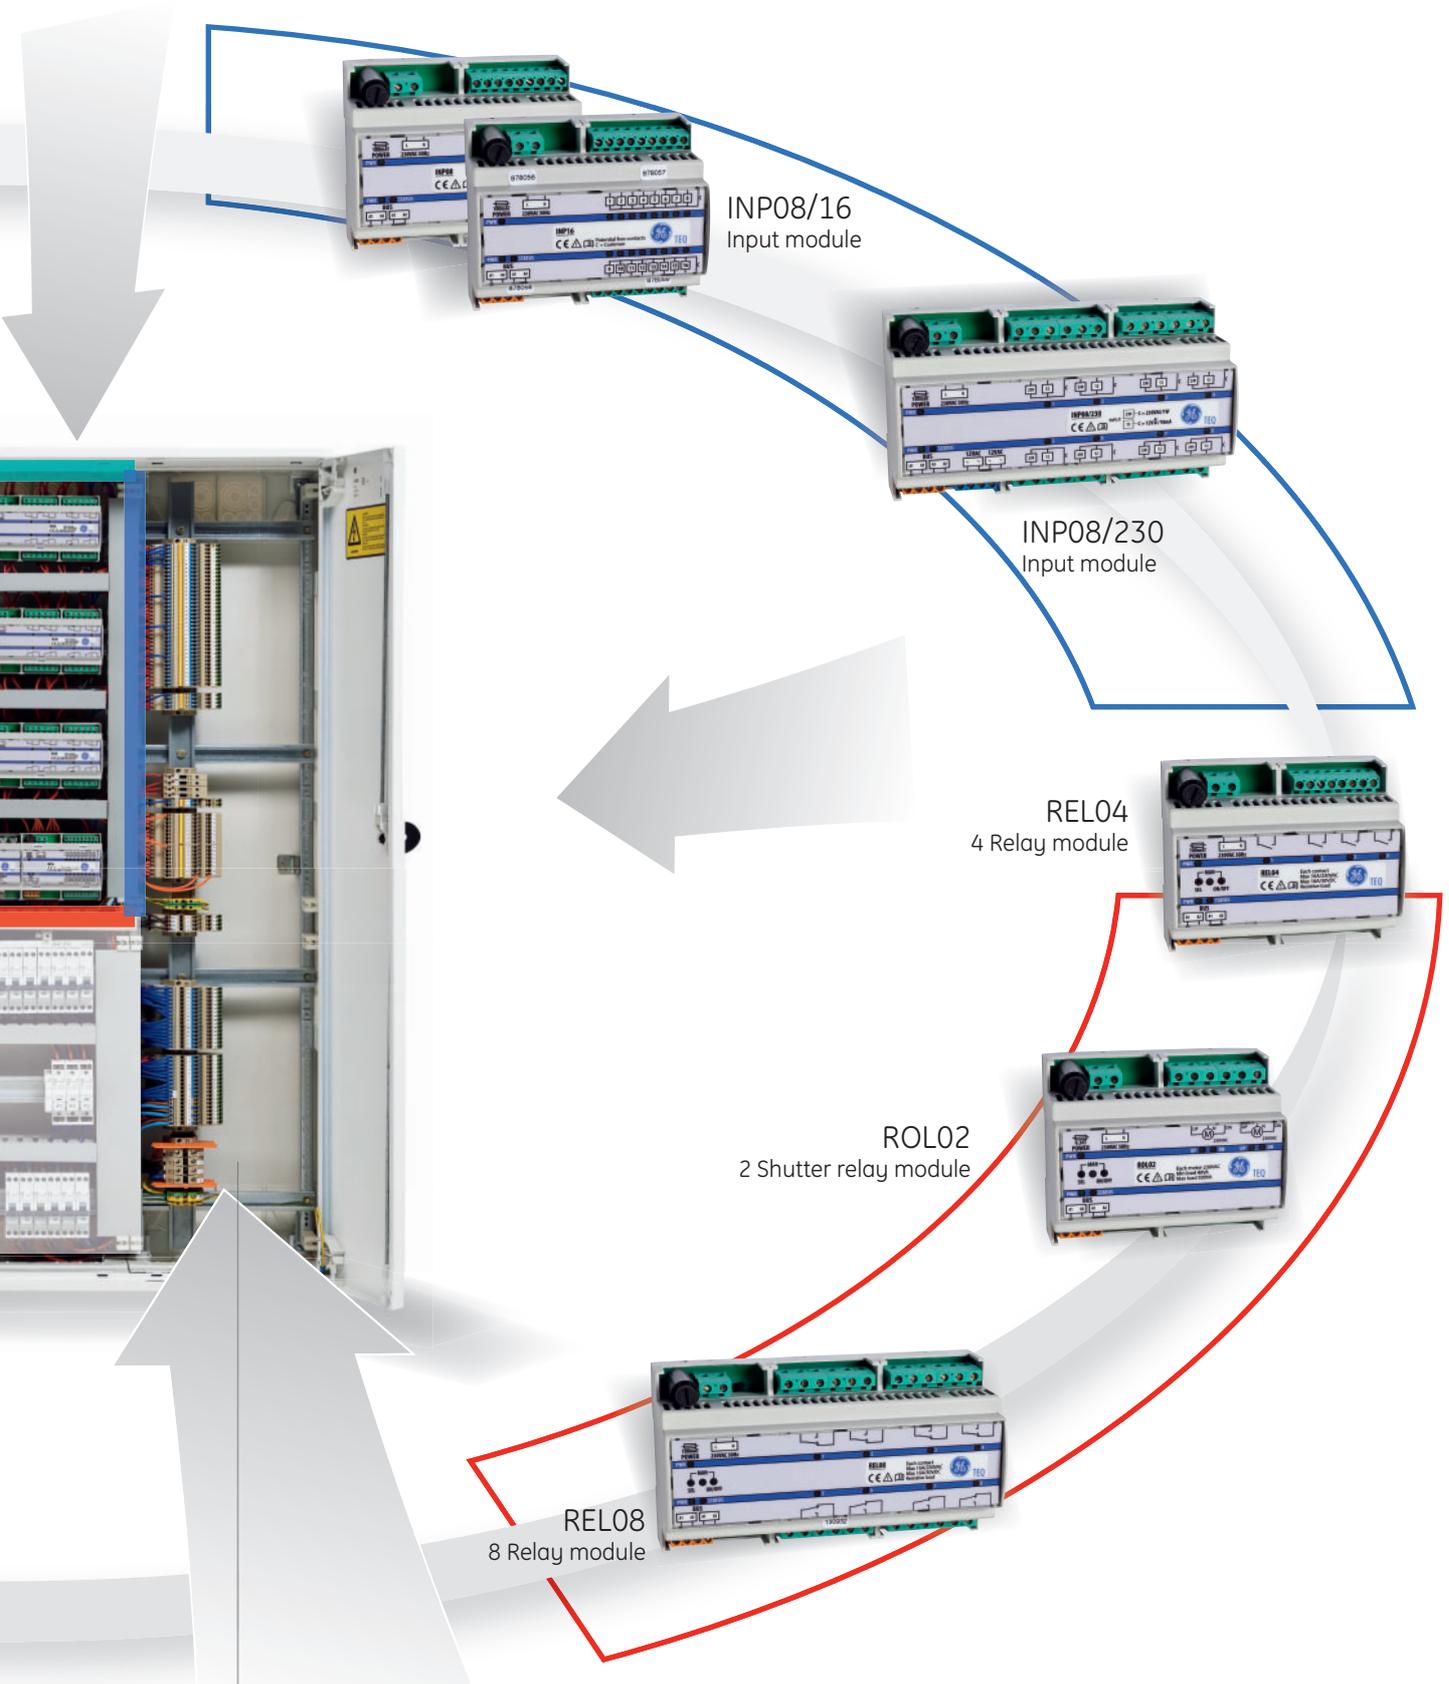

Simple installation – Can be done by your local electrician

- Quick & easy system setup through PC
- “HabiTEQ™ System Manager” free software. For online support go to the homepage of our website and click on Portfolio Residential. www.ge.com/ex/industrialsolutions

Pre-wired distribution board Automation components

- Fast & flexible 2-wire BUS system
- Quick & easy configuration
- "Plug & Play" operation

Separate cable compartment (enclosure types C-D-E-F)
Enclosure shown is type C7 (see page 22)

Pre-wired distribution board Protection devices

- Quick & easy installation
- Circuit and people protection

RCD's for people protection

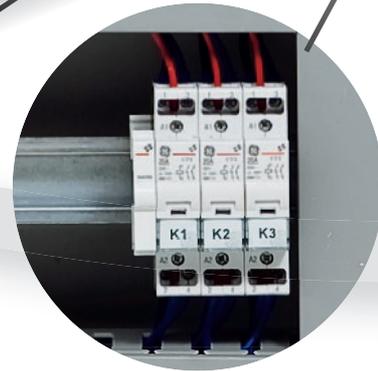

MCB's for line protection

Surge protection

Overtoltage protection

Contactors for controlled socket-outlets

Controlled outputs

M Motor

R Relay

D Dimmer

Potential free and 230Vac binary inputs
Connections from push-buttons, magnetic contacts and external detectors to input module.

BUS connection

Screwless terminals for quick connection

Conventional cabled and controlled socket-outlets

Customized distribution boards

One enclosure for each requirement

Type A
Fix-o-Rail 150
Surface Mounting

Rows	Type A	Code	H x W x D	Mod/ Row	Total Mod
4	FOR 150	A4	750x355x150	18	72

12	QuiXtra 630	FS12	2050x1240x250	36	432

- Customized:
 - equipped modular devices
 - separate cable compartment (in- and outgoing cables)
 - main compartment with transparent door
 - cables from socket circuits onto terminals
 - wiring of controlled outputs into terminals
 - wiring of inputs on terminals
- Optional: main compartment with plain door

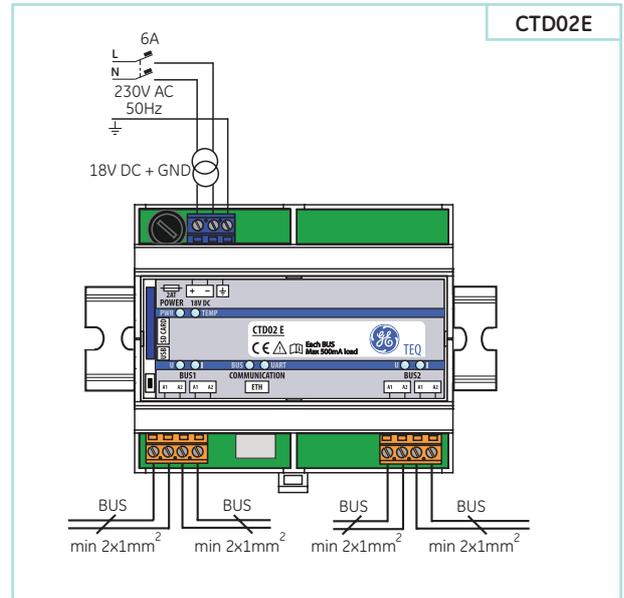

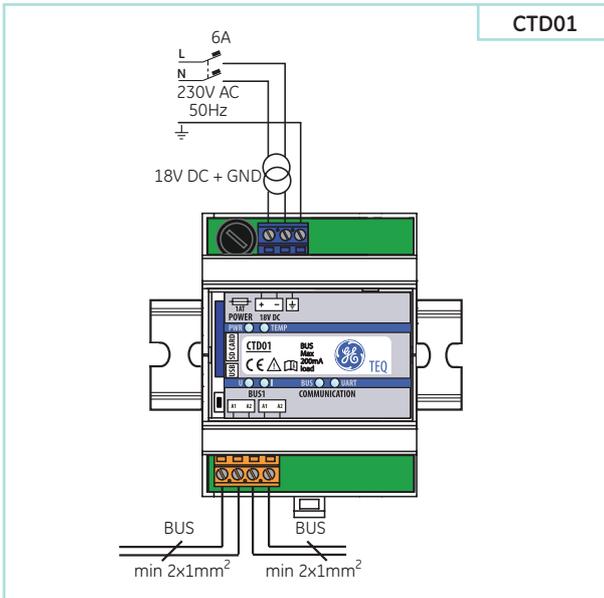

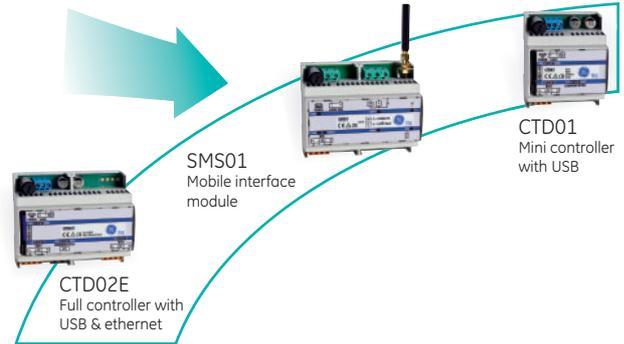

Automation components

Controllers

The controller is the central brain of the HabiTEQ automation system and delivers the necessary power and data to all the connected modules. The controller is available in 6 different versions to suit your installation size.

The power supply is delivered via a stabilized 18Vdc/2A lead (included). In case of a loss of the supply voltage a built-in back-up memory will save all data for at least 4 years.

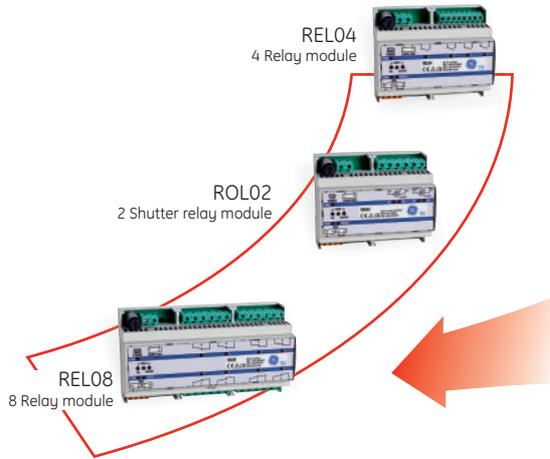

Controller	CTD01	CTD01E	CTD01E+	CTD02	CTD02E
Power supply	18Vdc / 2A (supplied with controller)				
Output BUS (per BUS)	13.8Vdc / 200mA	13.8Vdc / 200mA	13.8Vdc / 400mA	13.8Vdc / 500mA	13.8Vdc / 500mA
Power consumption	4W CTD01 / CTD01E / CTD01E+			6W CTD02 / CTD02E	
Approx. number of modules	12 to 15		30	35 per BUS	35 per BUS
Number of BUS connections	1			2	
Logical functions	Digital logical functions - (AND/OR/ IF.. THEN.. ELSE) ; Analogue logical functions (x, /, +, -, <, >, =)				
Protection - fuse	1 AF				
Fitting	DIN-rail				
Dimensions	4 modules (72mm)			6 modules (107mm)	
Built-in communication	USB	USB & ethernet		USB	USB & ethernet
Sequences or scenes/clock	92 /100				
Back-up memory time	4 years (on board 2GB -SD Card)				

General specifications for DIN-rail automation modules	
Operating temperature	+10 to +50°C without condensation
Storage temperature	-10 to +60°C without condensation
Maximum humidity	93%, without condensation
Protection degree	IP20, EN 60529
Fitting	DIN-rail to DIN EN 50022

Relay modules

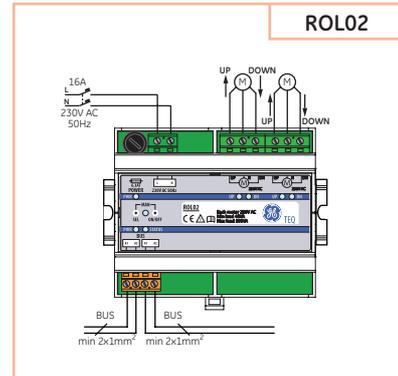

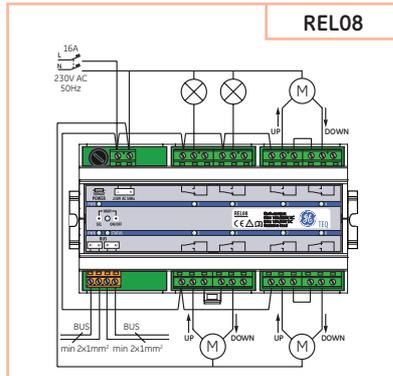

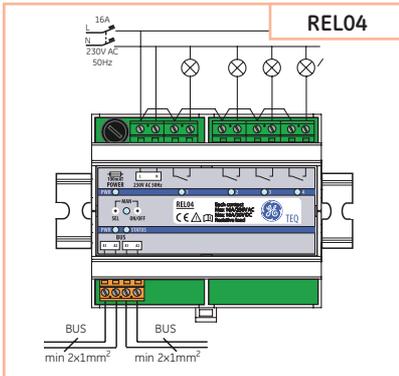

A choice of 3 different relay modules is offered to suit your switching application.

The relay module has 4 or 8 normally open, independently controlled contacts that can switch up to 16A each. The relay module does not have any specific function. It can handle all switching functions: monostable (bell), bistable (on/off), timer, interval, thermostat output, etc.

For shutter/blind/curtain control, the shutter module ROL02 must be used. For heavy inductive loads (multiple fluorescent lights) with a high capacity or bipolar applications, contactors need to be added. The relay module contact will then activate the coil of the contactor.

Each of the relay outputs has a unique serial number (e.g RELO8) enabling outputs programming anywhere and anytime. All programming remains internally stored in a nonvolatile memory. Following a loss of supply the outputs return to their previous position. A bipolar automatic fuse with a maximum of 16A must be placed on the feeder.

Relay modules	RELO4	RELO8	ROL02 (Shutter/Blinds)
Power supply	AC 230V +/- 10%, 50..60Hz - maximum		
Max. protection needed	16A/2P		
BUS load	10mA at nominal 13.8V		
Maximum consumption	9W (all relays ON)	15W (all relays ON)	9W (all relays ON)
Internal fuse	500mA		
Insulation voltage	3kVac (tested)		
Fitting	DIN-rail		
Type	OUT1 – OUT4: 4 potential-free NO single contacts	OUT1 – OUT8: 8 CO contacts	UP1/2 – DN1/2: 4 potential-free NO single contacts UP1 – DN1 and UP2 – DN2: internally locked contacts
Rated current	16A (resistive at 230Vac and 30Vdc)		
Rated load	Resistive load (cos phi = 1) / 16A at 230Vac / 16A at 30Vdc Inductive load (cos phi = 0.4; L/R=7ms) / 8A at 230Vac / 8A at 30Vdc		Minimum load: 40W on 230Vac
Maximum switching power	Resistive load (cos phi = 1) / 3680VA at 230Vac / 480W at 30Vdc Inductive load (cos phi=0.4; L/R = 7ms) / 1840VA at 230Vac / 240W at 30Vdc		Maximum load: 560W on 230Vac
Set/Reset time	15ms max. / 5ms max.		
Endurance	20mil. mechanical operations		
LED indication	Green LED: power supply		
	Red LED: Start-up 2s. and during programming		
	Orange LED: 1-X : Output 1 to x active Orange LED: manual mode	Orange LED:UP, DN: Up1 / Down 1 /Up2 / Down 2 active Orange LED: manual mode	
Dimensions	6 modules	9 modules (157mm)	6 modules

Dimmer modules

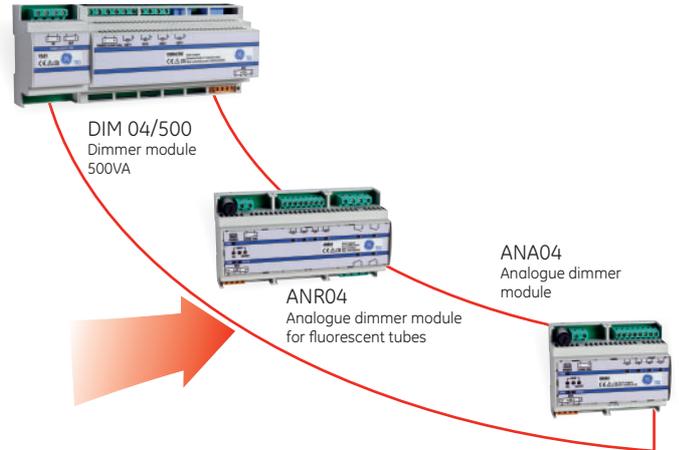

3 different dimmer modules are offered to suit a variety of dimming applications. The modules are controlled and programmable through the bus operating digitally with 8-bit precision. An optical separation between the inputs and outputs guarantees safe operation.

Multiple possibilities for dimmer control

1. One-button dimmer “∇” enables the reduction the number of control buttons.
2. Two-button dimmer: “Δ” and “∇” button enhancing the operating comfort.

When a button is kept depressed, the transit time from zero to maximum is 5.1s. A short pulse (< 0.3s) will take the dimmer to zero or to the maximum value in 2.5s.

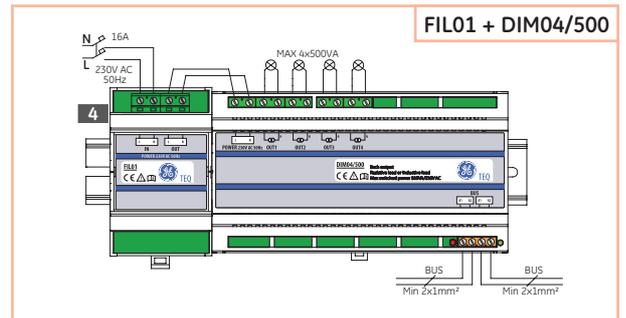

The maximum value can be adjusted from 20 to 100%. The lighting can also be dimmed automatically after a set time of 1s to 255min. Ideal for bedrooms... If the dimmers are controlled by a sequence the rise time and fall time can be adjusted independently between 0.3s and 20min. Each module has a unique serial number enabling programming anywhere and anytime. After a loss of power the outputs return to their latest position.

Dimmer module DIM04/500

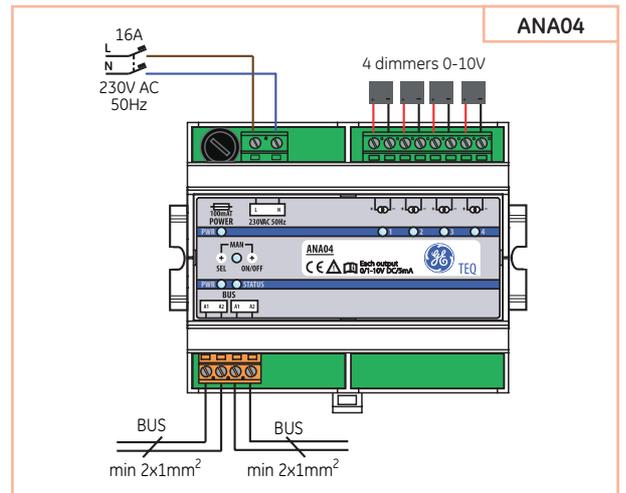

Module for a DIN-rail, suitable for dimming 4 loads of 500VA. The phase offset of each load is measured separately thus allowing the use of resistive (light bulbs) and inductive loads (conventional transformers). Electronic transformers can be used if they operate according to the phase leading principle. On the 500VA dimmer modules, each dimmer output is fused internally with a 4AF fuse. A 2P MCB 16A max. must be placed on the mains power.

Note an additional filter module will be supplied with 500VA dimmers.

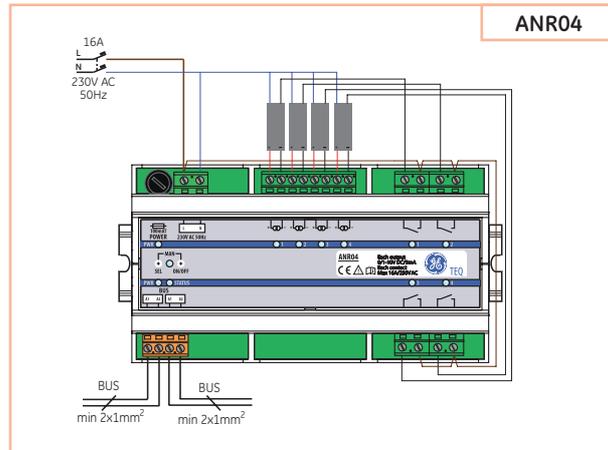

Analogue dimmer ANA04

Suitable for controlling four analog dimmers operating with input voltages of 0-10V. This module can be used for dimming very large capacities. It must be noted that the control voltages must not be connected to the mains. The negative terminals are internally linked. The control and programming are done through the 2-wire BUS, one or two button dimmer control. A 2P MCB 16A max. must be placed on the mains power.

Analogue dimmer ANR04

Each analog output controls a relay contact, which releases when the output is on 0. This contact can disrupt the mains voltage so that the fluorescent lamps go out completely. It must be noted that the control voltages must not be connected to the mains. The negative terminals are internally linked. The control and programming is done through the 2-wire BUS, including the option of using one or two push-buttons for the dimmer control. A 2P MCB 16A max. must be placed on the mains power.

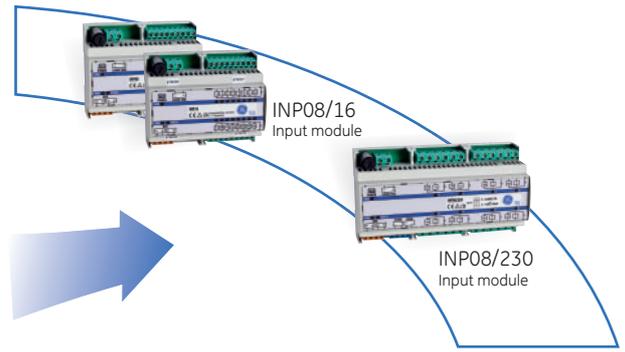

Dimmers	DIM04/500 + Line filter	ANA04	ANR04
	Forward phase dimmer modules		Analogue dimmer modules
Power supply	230Vac, 50Hz maximum		
Max. protection needed	16A/2P		
BUS load	10mA at 13.8V		
Standard consumption	2.3VA		6VA
Internal fuse	4AF / output	100mAT single phase	
Fitting	DIN-rail		
Insulation voltage	3kV		
Type	OUT1 – OUT4: Dimmable outputs 500VA / channel	OUT1 – OUT4: Analogue outputs 0-10V /channel	
	-	SW1 – SW4: 4 potential-free NO single contacts	
Maximum load	Incandescent load 500VA at 230Vac Halogen lamps 500VA at 230Vac	Max. 10mA for analogue output	Max. 10mA for analogue output
Minimum load	30% of maximum output	-	
LED indication	Green LED: power supply		
	Red LED: Start-UP 2s. and during programming	Orange LED - Manual override Orange light 1-4: Output 1 to 4 active	
Rated current	-	16A	
Endurance	-	20mil. operations	
Rated load	-	Resistive load (cos phi = 1) 16A at 230Vac 16A at 30Vdc	
	-	Inductive load (cos phi = 0.4; L/R=7ms) 8A at 230Vac 8A at 30Vdc	
Maximum switching power	-	Resistive load (cos phi=1) 3680VA at 230Vac 480W at 30Vdc	
	-	Inductive load (cos phi=0.4; L/R=7ms) 1840VA at 230Vac 240W at 30Vdc	
Dimensions	9 modules + 3 modules for filter	6 modules	9 modules

Input modules

3 different input modules are available in the HabiTEQ to connect external contacts such as solar/wind detector, movement detector, door switches, push-buttons and analogue sensors. 8/16 optical isolated inputs are provided, which must be potential-free.

The input contacts can be selected and set using the PC software:

- Push-button = button that is open when inactive (e.g. doorbell)
- Normal open = contact that is open when inactive
- Normal closed = contact that is closed when inactive
- Switch = single-pole conventional switch. The maximum length of each input is 200m. The cable type is irrelevant as long as the 2 wires are each 1mm². (Contact load 1mA) Each of the 8 inputs has two serial numbers. The common (first connector on the right top and bottom) is connected internally. One may connect these together with other INP16 modules.

Always use potential-free contacts!
Never connect or disconnect modules while the bus is energized!

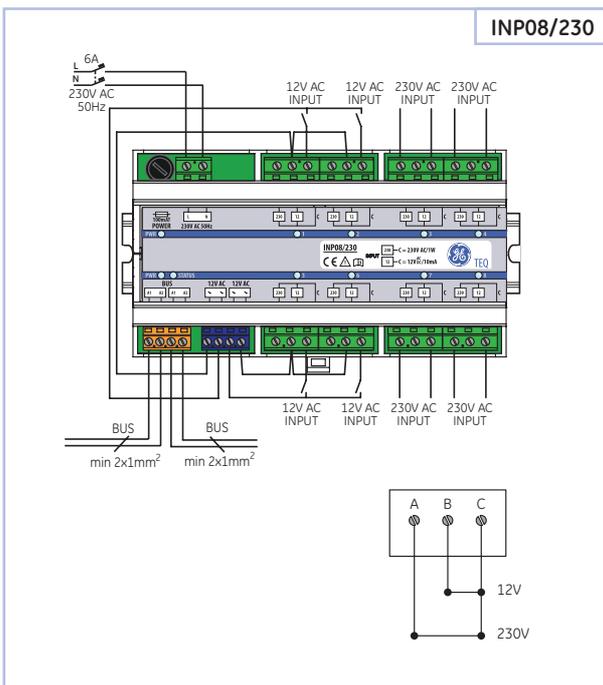

INP08/230

There are 8 optically insulated inputs. Each input needs a voltage to be active.

This can be:

- 12Vac/dc if connected between B and C (consumption approximately 10mA)
- 230Vac if connected between A and C (consumption approximately 1W)
- Orange LED lights positioned near inputs 1-8 indicate if input is active.

If there are inputs with potential-free contacts they can be connected to the module via 12Vac. The required voltage is provided on the top and bottom sides of the module.

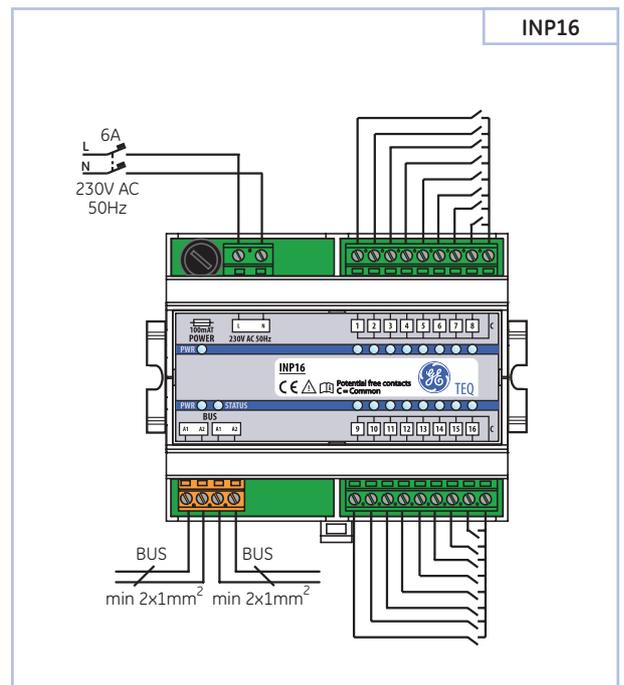

INP08/INP16

There are 8 or 16 optically insulated inputs. Each input needs a voltage to be active.

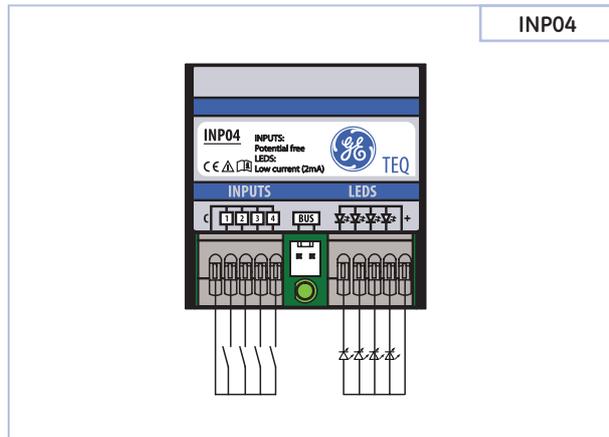

This can be 12Vac/dc if connected between B and C (consumption approximately 10mA)

If there are inputs with potential-free contacts they can be connected to the module via 12Vac. The required voltage is provided on the top and bottom sides of the module.

INP02/04

This module can be used to interface with any conventional switch to the BUS. The size of the module permits installation within the switch flush mounted box.

Product description

Module for connecting external contacts such as regular switches and push-buttons, solar/wind detector, motion detector, smoke detectors, ...

On the INP02/04, 2/4 potential free contacts and 2/4 low-current LEDs (2mA without serial resistor) can be connected. The maximum length of the conductor between the INP02/04 and the potential free input is 20 meters.

The cable type or its section is irrelevant.

An INP02/04 can control 2/4 outputs, 2/4 scenes or 2/4 x 16 scenes (via the sequence function).

The two/four low-current LEDs that can be connected to INP02/04 show the status of the mode that has been selected (push-button, normal open, normal close, switch). The INP02/04 is connected on the bus, and gets its power from the BUS.

Digital Input modules	INP02 ⁽¹⁾	INP04	INP08	INP16	INP08/230
Power supply	BUS powered		230Vac/50..60Hz		
BUS load	10mA at 13.8V				20mA at 13.8V
Standard consumption	-		2.65VA		9.2VA
Insulation voltage	-		3kV		
Fitting	Typically inside conventional switch box in the wall or surface mount with double side stick tape.		DIN-rail		
Number of inputs	2 potential-free	4 potential-free	8 potential-free	16 potential-free	8 potential-free (optically separated 12Vac/dc or 230Vac selectable by connection)
Input function (configurable through system software manager)	Push-button = button that is open when inactive (e.g. doorbell). Normal open = contact that is open when inactive. Normal closed = contact that is closed when inactive. Switch = single-pole conventional switch.				
LED indication	Green LED: power supply External LEDs can be connected to indicate status of each Input if needed.		Green LED: power supply		
			Red LED : Start-up 2s. and during programming		
			Orange LEDs 1 - 8: when the contact is connected (closed)	Orange LEDs 1 - 16: when the contact is connected (closed)	Orange LEDs 1 - 8: when the contact is active
Dimensions	HxWxD = 12x40x41mm		6 modules		9 modules

(1) on request

Communication interfaces

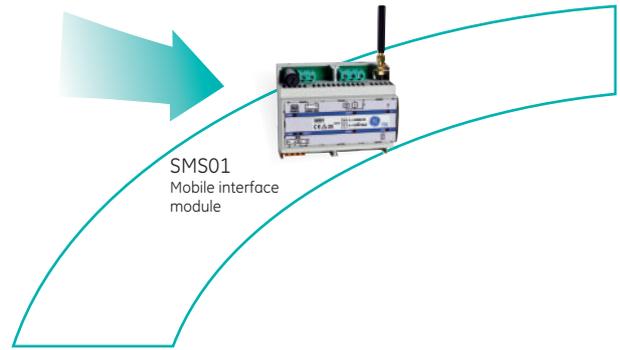

Communication can be established through the PC via an ethernet connection or through a serial USB interface. Further control of HabiTEQ system can also be achieved through a mobile phone using basic pre-configured SMS messages.

Ethernet/WEB interface

Incorporated into the controller. (see p. 24)

Serial interface - USB

The serial interface allows the HabiTEQ system to communicate with a PC or a modem. The "HabiTEQ System Manager" software (supplied free of charge) allows programming and operation of the installation.

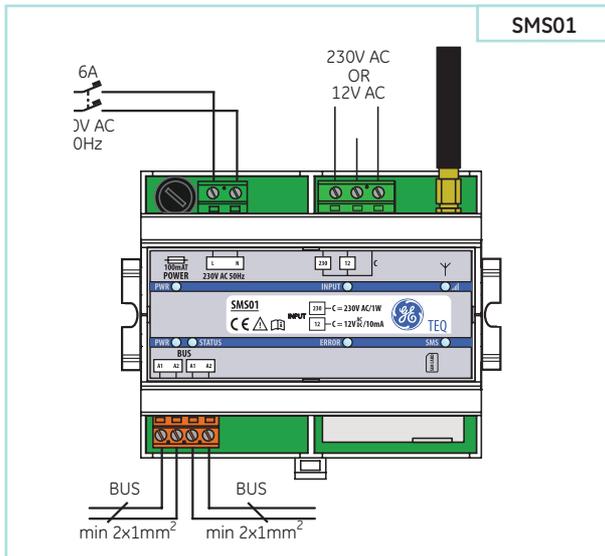

Mobile interface module

The SMS01 is a DIN mounted module that can be installed within the HabiTEQ system. The power supply is 230Vac. If the module must work when power drops, a UPS or internal rechargeable battery (Li-Ion) will be required. An additional connection (230V or 12V) is available to send a SMS message when the power drops.

The SIM card must be inserted into the SIM card reader located at the bottom of the module. If the module is mounted in a metal distribution box or on a place with bad network coverage (cellar, concrete....) it is recommended to add an optional antenna.

Features:

- Maximum 8 phone numbers can get access to the system
- View and control outputs: max 96 channels (sequences included) can be activated
 - Confirmation to selectable numbers
 - Compares SMS texts with predefined texts e.g. "KITCHEN ON" or "KTC ON"
 - Different value definitions (e.g. ON - OFF - 0 - 1 - 50%...)
- Alarm messages:
 - Maximum 16 different alarm messages (e.g. burglar alarm, fire, power down etc.) can be sent to up to 8 phone numbers with intervals selectable from 1min up to 255min. and repeat rate 1-31 for each SMS can be set.
 - Stop sending alarm texts when "SMS - STOP" message is received.
 - "Power Loss" warning to all numbers

Note: Pincodes can not be enabled or disabled when the SIM card is in the module. Pincode authentication of the SIM card can only be achieved with a mobile phone before placing it back in the module.

Mobile Interface	SMS01
	SMS MODULE
Power supply	230Vac, 50..60Hz - maximum
Power guard connection	Power guard inputs: Connection I1 - C : 230Vac - max 1VA Connection I2 - C : 12Vac - max 1VA
BUS load	15mA at 13.8Vdc
Characteristic consumption	5VA
Internal fuse	100mA
Insulation voltage	3kV
Control	Up to 96 outputs (including sequences) can be activated or viewed
Access	Max. 8 phone numbers can get access to the system
Control possibilities	SMS texts can have different defined texts for different users and different status definition
Alarm messages	Max. 16 alarm messages can be sent to all numbers Warning power down to all numbers if battery is connected
SIM card	Not included
Antenna	Built-in antenna on top and optional external antenna
Band width	Tri-band
Dimensions	6 modules

System controllers

CTD01 - mini controller USB

Description

One BUS connection
 Supply 200mA at 13.8V
 Built-in thermal protection
 (When connecting the modules, polarity is not important)
 On average about 12-15 modules can be connected to the bus.
 USB port through which the controller can be connected to a computer
 2GB SD Card (that stores system configuration and can log system events)

Ref. No.

678989

CTD01E - mini controller USB & ethernet

Same specifications as CTD01 controller
 Additional ethernet port with webserver

678990

CTD01E+ - mini controller USB & ethernet

Same specifications as CTD01E controller
 Extended supply 400mA at 13.8V
 On average about 30 modules can be connected to the bus.

679841

CTD02 - full controller

Two BUS connections
 Supply 500mA at 13.8V per BUS, 1000mA in total
 Built-in thermal protection
 (When connecting the modules, polarity is not important)
 On average 70 modules can be connected to CTD02 (about 35 per BUS).
 USB port through which the controller can be connected to a computer
 2GB SD Card (that stores system configuration and can log system events)

678991

CTD02E - full controller USB & ethernet

Same specifications as CTD02 controller
 Additional ethernet port with webserver

678992

WARNING

Read the complete manuals before carrying out any installation or activating the system.

Universal load actuators

REL04 - relay module

Description

Ref. No.

DIN-rail module suitable for switching four devices.
4 potential-free NO contacts, each can handle a max of 16A at 230V (cosφ=1)
Each can be allocated an individual function by means of the software

679008

The module can handle all switching functions⁽¹⁾:
mono-stable (bell), bi-stable (on/off), timer, interval, thermostat output, etc.

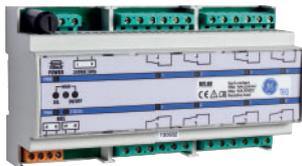

ROL02 - shutter module

DIN-rail module, suitable for switching⁽¹⁾ 2 shutters / blinds / curtains.
2X2 potential-free NO contacts, each can connect 16A at 230V (cosφ=1)
The second contact can only give power output when the first output is not activated. Thus avoiding mutual signals on UP1 (/UP2) and DN1 (/DN2) when activating the 2 outputs at the same time.

679009

REL08 - relay module

DIN-rail module, suitable for switching⁽¹⁾ eight devices.
8 potential-free CO contacts, each can handle a max of 16A at 230V (cosφ=1)
Each can be allocated an individual function by means of the software

679010

The module can handle all switching functions:
mono-stable (bell), bi-stable (on/off), timer, interval, thermostat output, etc.

(1) For heavy inductive loads (multiple fluorescent lights) with a high capacity or bipolar applications, modular contactors need to be added. The relay module contact will then activate the coil of the contactor.

Modular contactors - Contax: see the full range of contactors in Residential components catalogue

Input modules

INP08 - 8-channel input module

Description

Ref. No.

DIN-rail mount module for connecting external contacts such as solar/wind detector, motion detector, door switches and push buttons. Eight potential free isolated inputs are provided. The input contacts can be selected and set using the System Manager software:

- Push button = button is open when inactive (e.g. doorbell).
- Normal open = contact is open when inactive.
- Normal closed = contact is closed when inactive.
- Switch = single-pole conventional switch.

679014

The maximum length of each input is 200 meters. The cable type or its section is irrelevant.

INP16 - 16-channel input module

DIN-rail mount module for connecting external contacts such as solar/wind detector, motion detector, door switches and push buttons. Sixteen potential free isolated inputs are provided. The input contacts can be selected and set using the System Manager software:

- Push button = button is open when inactive (e.g. doorbell).
- Normal open = contact is open when inactive.
- Normal closed = contact is closed when inactive.
- Switch = single-pole conventional switch.

679015

The maximum length of each input is 200 meters. The cable type or its section is irrelevant.

INP08/230 - 8-channel input module with potential (Vac/Vdc)

DIN-rail module for connecting external contacts such as solar/wind detector, motion detector, door switches and push buttons. There are 8 optically insulated inputs. Each input needs a voltage to be active. This can be:

- 12Vac/dc if connected between B and C (consumption approximately 10mA).
- 230Vac if connected between A and C (consumption approximately 1W).

679016

If there are inputs with potential-free contacts they can be connected to the module via 12Vac. The required voltage is provided on the top and bottom sides of the input module.

The input contacts can be selected and set using the System Manager software:

- Push button = button that is open when inactive (e.g. doorbell).
- Normal open = contact that is open when inactive.
- Normal closed = contact that is closed when inactive.
- Switch = single pole conventional switch.

The maximum length for each input is 200 meters. The cable type or its section is irrelevant.

Input modules for any switch interface

The INP02/04 is a miniature yet versatile input module that offers the flexibility to interface any push-button switches to the HabiTEQ automation system. The size of the modules enables the mounting of the module in most of the current switch boxes.

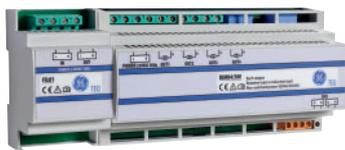

INP02/04 - input modules

	Description	Ref. No.
	2-channel input module⁽¹⁾	678996
	4-channel input module Module for connecting regular switch. Or external contacts such as detectors, door switches, magnetic contacts for doors or windows, etc. The input contacts can be selected and set using the PC software: - Push button = button is open when inactive (e.g. doorbell). - Normal open = contact is open when inactive. - Normal closed = contact is closed when inactive. - Switch = single pole conventional switch. 4-LED connections, which can be used to indicate the status of each input.	679013

(1) on request

Lighting control

DIM500 - dimmer module + line filter

DIN-rail module, suitable for dimming 4 loads of 40-500VA (refer de-rating curve for higher temp). The dimmers operate digitally with 8-bit precision. An optical separation between the inputs and outputs guarantees safe operation.

 Each dimmer output is fused internally with a 4AF fuse. Ensure adequate ventilation in the fuse box. A 2P MCB of maximum 16A must be placed on the mains power.

679942

ANA04 - analogue dimmer module

DIN-rail module, suitable for controlling four analog dimmers operating with input voltages of 0-10V or 1-10V (can be selected via HabiTEQ System Manager software). The control contains four digital-analogue converters with 8-bit precision.

679017

An optical separation between the inputs and outputs guarantees safe operation. This module can be used for dimming very large capacities.

ANR04 - analogue dimmer module

DIN-rail module, suitable for controlling four analog dimmers operating with input voltages of 0-10V or 1-10V (can be selected via HabiTEQ System Manager software). The control contains four digital-analogue converters with 8-bit precision.

679018

An optical separation between the inputs and outputs guarantees safe operation. This module can be used for dimming very large capacities.

Each analogue output controls a relay contact, which releases when the output is on 0. This contact can disrupt the mains voltage so that the fluorescent lamps go out completely

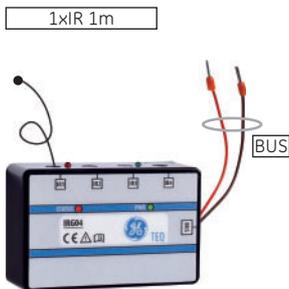

Communication interfaces

SMS01 - SMS module

Description	Ref. No.
<p>Mobile phone interface module DIN-rail mounted 230Vac module. Enables control and monitoring of the system via simple text messages.</p> <p>Any SIM card from local GSM service provider, with the PIN REQUEST DEACTIVATED can be inserted into the SIM card holder</p> <p>Features:</p> <ul style="list-style-type: none"> • Max. 8 phone numbers can access system • Max. 96 channels can be activated • Confirmation messages to selected phone numbers • Messages and values can be defined (e.g. ON- OFF - 0 - 1 - 50%...) • Maximum 16 different alarm messages <p>(Antenna & cable included)</p>	678988

IRG04 - infrared generator

<p>The IRG04 module is able to generate any IR code and transmit it to any device. This module makes it possible to control infrared operated devices such as a DVD player, music system, and shutters, aircon fan coil, TV. Each module has 4 different outputs, which can all send 16 different IR-codes.</p> <p>The required infrared codes need to be entered in the HabiTEQ™ SDB database by sampling them through an infrared switch with 4 buttons (SWC04I/MI) or a thermostat infrared display (THI01). The codes are stored in a non volatile memory.</p> <p>The IRG04 has 4 low power IR LED outputs. The IR LED attached to the included cables (2m) must be mounted immediately in front of the controlled device.</p> <p>All infrared codes can be sent using a SWC04I/MI, THI01, infrared remote control, TSC5.8".</p> <p>Includes 1-IR LED emitter with 1m cable.</p>	679101
--	--------

Sensors - Motion and Light

MDI01 - Motion & lights sensor - indoor

Description	Ref. No.
<p>Wall or ceiling mount module that can detect motion & light. The detector is integrated in a built-in frame with claw attachment and is connected to the HabiTEQ bus (no polarity). The motion detector has a range of approximately 7m at an angle of 110 degrees.</p> <p>The System Manager software allows you determine whether the output is a combination of motion AND light or only motion or only light⁽¹⁾.</p>	
White	679084
Black	679092
Metallic	679100

(1) Light dependent: Control of lighting in shop windows, offices, car parking areas, sunblinds, shutters, or even lighting in a home.
 Features: User presettable switch light intensity, intensity range and hysteresis (to avoid on/off instable behaviour). Reaction time is also user presettable. 1 channel, 2 channels and 1 channel with incorporated digital time switch with week-cycle, all with separate photocell are available besides a 1 channel all-in-one device.
 Function: Electronic switch controlled by the intensity of the ambient light, detected by a separate or integrated photocell (depending on the model). When the light intensity drops below the threshold setting, the switch changes its state to the on position. An increasing ambient light intensity eventually will switch off the device again.

Light Sensitive Switches - GALAX LSS: see the full range of contactors in Residential components catalogue

System visualization

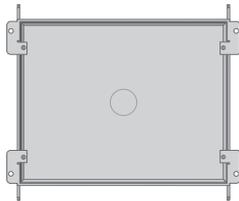

THI01 - 2-line control panel

	Description	Ref. No.
	Wall mount system control panel with a 2 line 16-character LCD display. Menu driven display controlled by 4 push buttons on the front. The module has the following functions in addition to control of upto 96 output channels. - Thermostat with built-in temperature sensor - Infrared receiver to control upto 99 outputs/scenes with any universal infrared remote control.	
	Metallic frame	679039
	White frame	679021
	Black frame	679022

TSC5.8 - monochrome touch screen

	Display module with an illuminated LCD touch screen for mounting inside the wall. - User-friendly menu allows operating 96 outputs and viewing their status. - Choice between 6 main menus and a random number of outputs can be programmed under each main menu. - Up to 8 outputs can be operated per screen (=submenu). - Built-in temperature sensor for thermostats function.	679102
---	--	--------

TSCBOX

	Box for monochrome touch screen. For mounting the TSC5.8 into the wall.	679103
---	--	--------

TEQHC - Home Center

	HMI software The GE home center software runs on any Windows XP, XP Embedded or Vista PC and allows control and visualizes a HabiTEQ installation in an intuitive and user-friendly manner. The customer can easily add floor plans or groups and allocate outputs to certain rooms. Standard IP-cameras that support the mjpeg format can easily be connected to the GE Home Center	678995
---	---	--------

TCPC / NAV10.2 - Third party panel PC

	On request the GE TEQ center can be provided pre-installed on a touch panel PC hosting Win-XP . The PC comes with power supply.	
	Frame grey metal	678997
	Frame black	679918
	Frame white	679919
	Flush mounted box system	679917

WPAD - Third party tablet PC

	On request the GE TEQ Center can be provided pre-installed on a tablet PC hosting Windows 7 (Windows 8 starting 2013) The PC comes with AC Adapter Charger.	679846
---	--	--------

Smart switch - Niko® design

Comfort simplified

Lights on

One switch not only allows you to control 8 lights individually. It also allows you to do so much more like dimming lights, delayed disconnect, controlling light atmospheres, running lights, shutters, ...

Universal infrared receiver

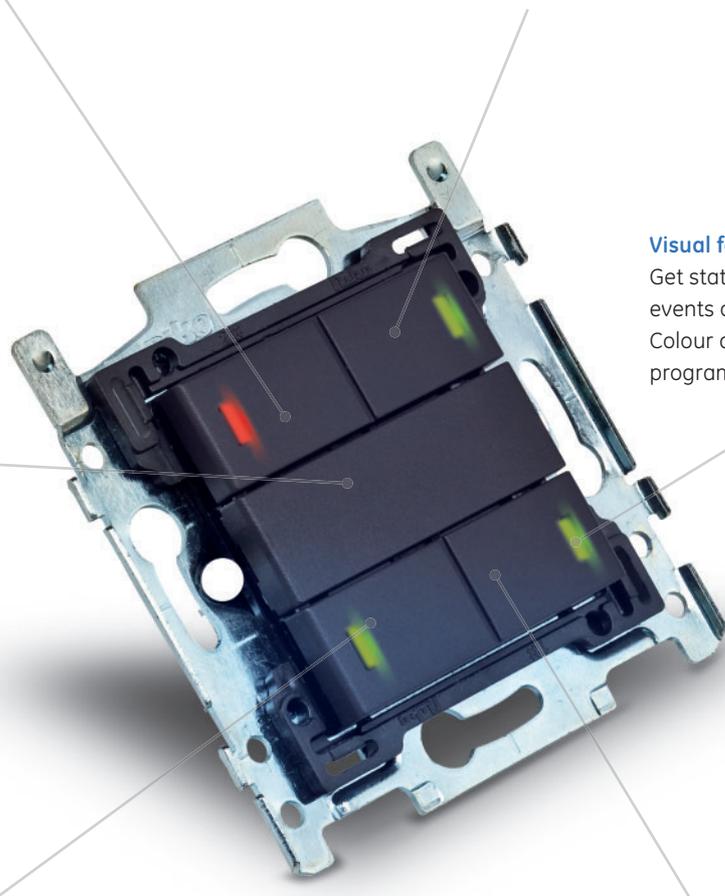

All infrared commands are immediately forwarded to the central unit via the switch.

Light measurement

Fully adjustable, the switch measures the ambient light.

Visual feedback

Get status feedback of different events on the BUS through LED's. Colour and brightness of LED programmable through software.

Design

The smart switch is available in Niko® design.

Digital temperature measurement

The switch senses the temperature and issues the right commands to the central unit to e.g. activate the airconditioning or the heating.

Specifications	
Power supply	BUS powered
BUS load	8 mA at nominal 13.8V
Dimensions	HxW = 71x73mm

Smart switch

SWC04 - 4-button smart switch

Description	Ref. No.
<ul style="list-style-type: none"> • Available in 4 standard colours⁽¹⁾ • Further options upon request • Cover plate to be ordered separately⁽²⁾ <p>A 4 push-button electronic smart switch with 4 RGB LED integrated into a Niko® built-in frame with claw attachment. A BUS connection with connector (no polarity) is provided and supplies the power and control of the module.</p> <p>One push-button can operate 1 output, 2 scenes (short or long push) and up to 16 scenes.</p> <p>Simultaneous press on any of two keys enables entry into second page, where 4 more outputs are available. So in total upto 8 outputs can be controlled through this module.</p> <p>Each of the 4-LED gives feedback according to the status of the corresponding output. The colour and the brightness can be set via the software.</p>

	MM108 Surface overhead - angle mount contact	679982
	MM115 Surface mount contact - wired	679984
	DC193 L-bracket for DC102, DC104, DC123, DC137	679985

Safety sensors

	Description	Ref. No.
	Sensors linked through input modules. Separate power supply needed (9-24V). Smoke sensors DP721R⁽¹⁾ Photoelectric smoke detector with field exchangeable optical chamber as well as a built-in relay for local switching applications <ul style="list-style-type: none"> • CO relay output 	679956
	DP721RT⁽¹⁾ Photoelectric heat and smoke detector <ul style="list-style-type: none"> • With field exchangeable optical chamber and local relay output facilities 	679957
	DP721RTA⁽¹⁾ Photoelectric smoke and heat detector with relay output, auto reset	679958
	DB702 Conventional fire detector base used for all 700 series conventional fire detectors. <ul style="list-style-type: none"> • Includes a normally closed continuity switch to allow easy cable testing during installation 	679997
	211 Replacement optical chamber for 700 series detectors	679996

(1) Please consult us.

Safety sensors (continued)

	Description	Ref. No.
	<p>Stand alone battery powered smoke detector</p> <p>562NSE</p> <ul style="list-style-type: none"> • With on board sounder • Local silence and test function • Full EN14604 approval • Self-diagnostics monitor sensitivity and operational status • Replaceable optical chamber for easy maintenance 	<p>679950</p>
	<p>Hazardous gas sensors</p> <p>FGT312CO</p> <p>Alarm</p> <ul style="list-style-type: none"> • 50 ppm (parts per million) 75 minutes • 100 ppm 25 minutes • > 300 ppm immediate 	<p>679963</p>
	<p>Flammable gas sensors</p> <p>FGE312LP</p> <p>LPG detector for domestic applications</p> <ul style="list-style-type: none"> • Alarm relay 12-24Vdc • Prealarm 5% LEL • Alarm 10% LEL 	<p>679959</p>
	<p>FGE330LP</p> <p>LPG detector for domestic applications</p> <ul style="list-style-type: none"> • Alarm relay, 230Vac • Prealarm 5% LEL • Alarm 10% LEL 	<p>679960</p>
	<p>FGE312ME</p> <p>Methane detector for domestic applications</p> <ul style="list-style-type: none"> • Alarm relay, 12-24Vdc 	<p>679961</p>
	<p>FGE330ME</p> <p>Methane detector for domestic applications</p> <ul style="list-style-type: none"> • Alarm relay, 230Vac 	<p>679962</p>
	<p>Glass break sensor</p> <p>GS930</p> <p>Acoustic glass break detector - 3x3 technology</p> <ul style="list-style-type: none"> • Semiconductor relay opens on alarm 	<p>679964</p>
	<p>GS905</p> <p>Handheld acoustic glass break tester with real glass break sounds</p> <ul style="list-style-type: none"> • Different settings depending on kind of glass to be protected 	<p>679965</p>
	<p>Sirens</p> <p>AS270</p> <p>Indoor siren, 1 tone - without flash</p>	<p>679994</p>
	<p>AS271</p> <p>Indoor siren, 1 tone - with flash</p>	<p>679995</p>

Safety accessories

	Description	Ref. No.
	<p>Panic buttons</p> <p>HB191¹¹ Personal attack switch - single button</p> <ul style="list-style-type: none"> • NC contact 	679986
	<p>HB194¹¹ The HB194 personal attack switch incorporates a mechanical double button</p> <ul style="list-style-type: none"> • Supplied with a key reset 	679987

Third party accessories

	<p>Combined sensors CO₂, temperature and humidity -BUS connected</p> <p>AIR01CT Measures the CO₂ concentration and temperature in the living space. The value measured can be used by the controller to activate a valve of a ventilation system, open or close a window via a motor, etc. in order to optimally aerate the space.</p>	678999
	<p>AIR01CHT Measures the CO₂ concentration, temperature and humidity in the living space. The value measured can be used by the controller to activate a valve of a ventilation system, open or close a window via a motor, etc. in order to optimally aerate the space.</p>	679847
	<p>AIR01HT Measures the temperature and humidity in the living space. The value measured can be used by the controller in order to provide optimal room climate.</p>	679848
	<p>Constant light control dimmer - CLC01</p> <p>The CLC01 ensures the desired light level remains constant in every room by adapting the lighting to the intensity of the natural light. The CLC01 is supplied and controlled via the HabiTEQ two-wire bus. The required light level can be set with the HabiTEQ configuration software. A light sensor on the CLC01 continuously measures the light level. The difference between the desired and effective light level is adjusted by the CLC01 that dims the connected lighting to Maintain the light level in the room at the required level. A galvanic separation between the bus and the output guarantees its safe operation. The CLC01 has an adjustable output (via the System Manager Software): 0-10V (sourcing - max 5mA) or 1-10V (sinking - max 100mA) that can be connected to one or more lighting fixtures.</p>	679914
	<p>Shutter module - ROL02P</p> <p>ROL02P can be used to control and position shutters. This module is suitable for switching and positioning two 230 Vac shutter motors with limit switch contacts. Each shutter on the ROL02P can be positioned between 0% and 100% of the run time. An internal calibration mechanism will calibrate the shutter every time it is fully raised or lowered. This ensures the desired position of the shutter remains accurate over time.</p>	679842

To complete your distribution board GE presents a wide range of modular devices

MCBs

Miniature circuit breakers

From 0.5 to 125A - 1 to 4P configuration.
 From 3kA to 50kA breaking capacities.
 According to EN/IEC 60898-1 and EN/IEC 60947-2
 Unibis™ compact MCBs:
 2P in 1 module, 3 and 4P in 2 modules.
 Fixwell™ screwless MCBs 6 and 10kA.

RCCBs

Residual current operated circuit breakers without integral overcurrent protection

From 16 to 100A and 10mA to 1000mA.
 According to EN/IEC 61008-1 and BS EN 61008-1

RCBOs

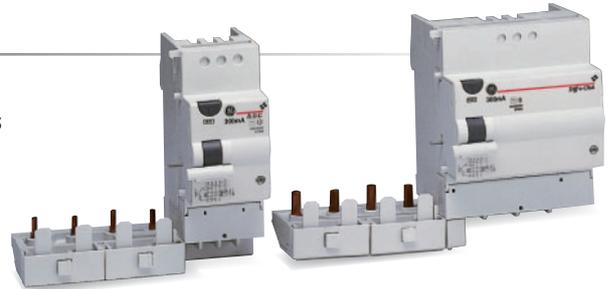

Residual current operated circuit breakers with integral overcurrent protection.

From 4 to 40A and 10mA to 300mA,
 1P+N. According to EN/IEC 61009-1

Add-on RCDs

Add-on residual current devices for MCBs

For 2 to 4 poles MCBs, 30 up to 1000mA.
 According to EN/IEC 61009-1

Energy control and comfort functions

Modular switches and push-buttons, impulse switches, contactors, time switches, time relays, transformers, measurement devices, surge arresters, ...

The policy of GE Energy is one of continuous improvement. The right is reserved to alter the design or any structural details of the products at any time without giving notice.

July 2012
GE Industrial Solutions

Industrial Solutions a division of GE Energy, is a first class global supplier of low and medium voltage products including wiring devices, residential and industrial electrical distribution components, automation products, enclosures and switchboards. Demand for the company's products comes from wholesalers, installers, panelboard builders, contractors, OEMs and utilities worldwide.
