

ACVATIX™

Modulating control valves with magnetic actuator, PN16

M3P..FY
M3P..FYP

for chilled and low-temperature hot water systems or for systems with media containing mineral oils (M3P..FYP)

- **Fast positioning time (1 s), high-resolution stroke (1 : 1000)**
- **Positioning signal: DC 0...10 V or DC 4... 20 mA**
- **Fail-safe feature: 1 → 3 closed when de-energized**
- **Low friction, robust, no maintenance required**
- **Indication of operating state, position feedback and manual control**

Use

The control valves are mixing or throughport valves with the ready fitted magnetic actuator for position control and position feedback. The short positioning time, high resolution and high rangeability make these valves ideal for modulating

Type summary

Type reference		DN	k _{vs} [m ³ /h]	Δp _{max} [kPa]	Δp _s [kPa]	Operating voltage	Positioning		Spring return
M3P..FY	M3P..FYP ¹⁾						signal	time	
M3P80FY	M3P80FYP	80	80	300	300	AC 24 V	DC 0...10 V or DC 4...20 mA	< 2 s	✓
M3P100FY	M3P100FYP	100	130	200	200				

¹⁾ for media containing mineral oils, heat transfer oils

DN = Nominal size

Δp_{max} = max. permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve

Δp_s = max. permissible differential pressure (close off pressure) at which the motorized valve will close securely against the pressure (used as throughport valve)

k_{vs} = nominal flow rate of cold water (5 to 30 °C) through the fully opened valve (H₁₀₀) at a differential pressure of 100 kPa (1 bar)

Flanged valves MXF461.., MXF461..P	DN 15...65	datasheet N4455
Threaded valves MXG461.., MXG461..P	DN 15...50	

Accessories

Set of blank flanges

Type reference	Description
Z155/80	Blank flange kit for flanged valve with DN 80. Contains blank flange, seal, screws, spring washers and nuts
Z155/100	Blank flange kit for flanged valve with DN 100. Contains blank flange, seal, screws, spring washers and nuts
SEZ91.6	External interface for DC 0...20 V phase cut control signal, refer to data sheet N5143

Order

When ordering, please give quantity, product name and type reference.

Delivery

Product number	Stock number	Description
M3P80FY	M3P80FY	Flanged valve with magnetic actuator
Z155/80	Z155/80	Set of blank flanges

Valve body and magnetic actuator form one assembly and cannot be separated.

The valve and blank flanges are packed and supplied separately.

Replacement electronics module

ZM250

Should the valve electronics prove faulty, the electronics module must be replaced by the ZM250 replacement electronics module. Mounting Instructions no. 35731 are included.

Rev. no.

See overview, page 9.

Technical and mechanical design

For a detailed description of operation, refer to data sheet CA1N4028E.

Control operation

The control signal is converted in the terminal housing into a phase cut signal which generates a magnetic field in the coil. This causes the armature to change its position in accordance with the interacting forces (magnetic field, counterspring, hydraulics etc.). The armature responds rapidly to any change in signal, transferring the corresponding movement directly to the control disc, enabling fast changes in load to be corrected quickly and accurately.

The valve position is inductively measured continuously. Any disturbance in the system is rapidly corrected by the internal positioning controller, which ensures that the control signal and the valve stroke are exactly proportional, and also provides a feedback signal indicating the valve position.

Control

The magnetic actuator can be driven by a Siemens controller or a controller of other manufacture that deliver a DC 0/2...10 V or DC 4... 20 mA output signal.

To achieve optimum control performance, it is recommended to use a 4-wire connection.

Spring return function

If the positioning signal is interrupted, or in the event of a power failure, the valve's return spring will automatically close control path 1 → 3.

Manual control

Control path ports 1 → 3 can be opened mechanically to between 0 and approximately 90 %, by turning the hand wheel clockwise.

The manual adjustment facility can also be used as a mechanical method of low limit control, i.e. the valve will exercise its normal control function between the manually-set position and the 100 % open position. For full-stroke automatic control, the hand wheel must be set to 0 (the counterclockwise end stop).

Sizing

Flow chart

Water

Δp_{V100} = differential pressure across the fully open valve and the valve's control path 1 → 3 by a volume flow \dot{V}_{100}

\dot{V}_{100} = volume flow through the fully open valve (H_{100})

Δp_{max} = max. permissible differential pressure across the valve's control path (ports 1-3, 2-3) for the entire actuating range of the motorized valve

100 kPa = 1 bar ≈ 10 mWC

1 m^3/h = 0.278 l/s water at 20 °C

Water with Antifreeze

For water with > 20 % antifreeze use following generic formula to calculate volumetric flow \dot{V}_{100} :

Generic formula

$$\dot{V}_{100} = \frac{Q_{100} \cdot 3600}{c \cdot \Delta T \cdot \rho} \quad [m^3/h]$$

- \dot{V}_{100} = Volumetric flow [m³/h]
- Q_{100} = Design energy demand [kW]
- ΔT = Temperature difference between flow and return [K]
- c = specific heat capacity [kJ/kgK]
- ρ = specific density [kg/m³]

When sizing valves for media other than water, note that the medium properties

- specific heat
- density
- kinematic viscosity

differ from water. All variables depend on temperature.

The design temperature is the lowest medium temperature in the valve.

Note on viscosity

Viscosity may change considerably on temperature changes depending on the medium. Plant functionality may be impaired if the medium temperature does not guarantee viscosity values compatible with troublefree valve functioning.

Kinematic viscosity $\leq 10 \text{ mm}^2/\text{s}$

Kinematic viscosity ν [mm^2/s] in HVAC plants always is lower than $10 \text{ mm}^2/\text{s}$, i.e. its influence on volume flow is negligible.

$> 10 \text{ mm}^2/\text{s}$

For details please contact your local Siemens branch office.

Valve characteristic

Linear

Volumetric flow

Connection type ¹⁾

The 4-wire connection to the valve should always be given preference!

4-wire connection

3-wire connection

Type reference	S_{NA} [VA]	P_{MED} [W]	S_{TR} [VA]	I_F [A]	Wire cross-section [mm^2]		
					1.5	2.5	4.0
max. cable length L [m]							
M3P80FY	80	20	100	6.3	10	16	27
M3P100FY	120	30	100	10	6	10	17
M3P80FYP	80	20	150	6.3	10	16	27
M3P100FYP	120	30	150	10	6	10	17
M3P80FY	80	20	100	6.3	10	16	27
M3P100FY	120	30	100	10	6	10	17
M3P80FYP	80	20	150	6.3	10	16	27
M3P100FYP	120	30	150	10	6	10	17

S_{NA} = nominal apparent power for selecting the transformer

P_{med} = typical power consumption

S_{TR} = Minimal required transformer power

I_N = required slow fuse

L = max. cable length; with 4-wire connections, the max. permissible length of the separate 1.5 mm^2 copper positioning signal wire is 200 m

¹⁾ All information at AC 24 V

Engineering notes

Conduct the electric connections in accordance with local regulations on electric installations as well as the internal or connection diagrams.

Attention 

Safety regulations and restrictions designed to ensure the safety of people and property must be observed at all times!

A strainer should be fitted upstream of the valve. This increases reliability.

Mounting notes

Two mounting instruction leaflets are enclosed with the valve: Ref. 35638 (valve) and reference 35731 (terminal housing).

Attention 

The valve may only be used as a mixing or throughport valve, not as a diverting valve. Observe the direction of flow 1 → 3!

Orientation

Access for installation

It is essential to maintain the specified minimum clearance above and to the side of the actuator and/or electronics module! (refer to "Dimensions", page 9)

Use as straight-through valves

Close off port '2' with the type Z155/... accessories, which must be ordered separately. For details see page 2.

The blank flange kit consists of a seal, screws, spring washers and nuts.

Installation notes

- The actuator must not be lagged
- For notes on electrical installation, see "Connection terminals" respectively "Connection diagram", page 8.

Maintenance notes

The valves and actuators are maintenance-free.

The low friction and robust design make regular servicing unnecessary and ensure a long service life.

The valve stem is sealed from external influences by a maintenance-free gland.

Repair

Should the valve electronics prove faulty, the electronics module should be replaced with replacement part ZM250. Mounting instructions are enclosed (Ref. 35731).

Warning 

Always disconnect the power before fitting or removing the terminal housing. The terminal housing is calibrated and matched to the actuator, and should be replaced only by qualified personnel.

Warning 

Under operating conditions within the limits defined by the application data, the actuator will become hot, but this does not represent a burn risk. Always maintain the minimum clearance specified, refer to "Dimensions", page 9.

Disposal

The actuator must not be disposed of together with domestic waste. This applies in particular to the PCB.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view

Current local legislation must be observed.

Warranty

Application-specific technical data must be observed.

If specified limits are not observed, Siemens Switzerland Ltd / HVAC Products will not assume any responsibility.
